## Nineteen Hundred and Eleven

logue) has come to call on you and quiet-I hope that our past dealings have been so satisfactory that there will be no question about who gets the order. The

season just past has not been altogether favorable to our constantly increasing trade. Ornamental shrubbery plant multiplication or propagation, but of a greater part of the standard money-making varieties we are very well supplied. I have about one hundred acres in young beds to draw on for stra berry plants to fill my orders, and while I shall do very litt'e advertising in the papers, I shall spare no pains to take the best of care of my old customers and any friends they may send to me. I have discontinued the retail seed business, for the present at least, in order to give my undivided attention to the plant and nursery business. Our plant business is constantly growing, so much so that it keeps

GAIN my Traveling Salesman (this Cata- us on the hustle to keep pace with it "THERE MUST BE A REASON." We have made arrangements to plant ly, at your convenience, talk over the 120 acres in strawberry plants alone for plant stock in matter of your 1911 order for plants, order to take care of our 1912 pl nt customers. Other small fruits are getting to be a feature also. It takes many thousands of Blackberry, Raspberry, Current and Gooseberry plants and Grape vines every year to supply and Hedge plants, the things that help so much to beautify our home surroundings and make them pleasant and worth while are getting to be no small part of our business. And in conclusion I wish to say that, in filling any orders that you or your friends may intrust to me, your entire satisfaction will be our first aim.

> Thanking you for your confidence in the past and trusting to merit it in the future, and wishing you happiness and prosperity throughout 1911, I remain.

> > Yours faithfully,

W. F. ALLEN.

### Please Read This, and Then, Please Read It Again!

We fill Strawberry plant and other small fruit plant and Shrubbery orders any time after November 1st, during November, December, January, F bruary, March, April, and until May 1st. From May 1st to May 10th we will fill a limited number of orders on any stock that is unsold and put it in the very best possible order, but at purchaser's risk as to results.

After May 10th, and during Jure, July, August, Sepapply to vegetable or flower plants.)

During March and April, the great planting season, almost our entire attention and that of over one hundred employees is given up to filling plant orders.

We are willing to answer any questions during the summer months as promptly as possible, if written in a short style and to the p int. Long letters are subject to long delays. This notice was made necessary from the fact that we receive hundreds of orders for strawberry plants during the summer months when we have no plants in fit condition to transplant, and when not one in ten could make even good plants grow if we could tember and October, we most positively will not fill any send them, unless it were potted plants, which we do not orders for small fruit plants. (This, however does not grow at all. Thanking you for your attention, I remain, Yours faithfully,

> W. F. ALLEN. Salisbury, Md.

### IMPORTANT TO CUSTOMERS

ORDERS should be sent in just as soon as possible after receiving this Catalogue. It is better for you as well as the nurseryman.

TIME OF SHIPMENT.—From the time you receive this Catalogue to May 1st. By far the larger part of our shipments are made during March and April Bermuds, Cuba, Florida, California and other similarly located sec tions are supplied any time the fall and winter after November 1st.

GUARANTEE.—I guarantee plants ordered by mail or express to reach customers in good condition when promptly taken from the express office and opened at once.

CLAIMS, if any, must be made on receipt of goods. I cannot become responsible for stock that is allowed to lay around your station or express office, for neglect of purchaser or his employees to care for stock after it has been received, or for misfortunes perpetrated by droughts, floods, frosts, insects, etc. These things are entirely beyond my control.

AT PURCHASER'S RISK—Plants shipped by freight will be at purchaser's risk and all small fruit plants shipped after May 1st will be packed and shipped in best condition possible. but always at purchaser's

PACKING -I make no charge for boxing or packing at rates quoted in this catalogue. ered f. o. b. trains at rates named Everything is deliv.

#### Our price includes the packing and the package.

TWENTY FIVES .- All plants are tied twenty-five in a bundle.

PAYMENT.—Invariably cash in advance. It is my desire that all customers should have the very best of success and strange as it may seem, plants that are not paid for seldom do well.

REMIT by Money Order, Registered Letter or Bank Draft. Postage Stamps will be accepted for the fraction-al part of a dollar, the larger 'n nominations preferred. Freign custom rs will please send Money Order on Sal-isbury, Maryla d, or Bank Draft payable in New York.

TRUE TO NAME.—While I use every precaution to have all PLANTS, etc., true to name (and I believe we come as near doing this as anyone in the business) I will not be responsible for any sum greater than the c st of the stock should any prove otherwise than as repre-

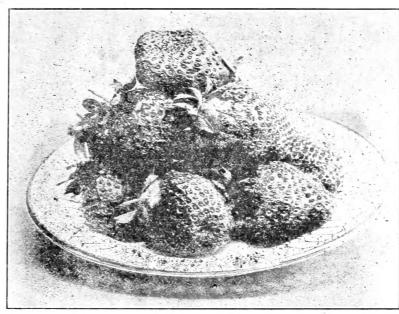

Plymouth Co, Mass, May 18, 1910

W. F. Allen, Salisbury, Md.

Dear Sir;—The sweet potato plants were received in excellent condition and I shall be glad to recommend your plants and careful attention shown to my order Very Respt., F. B. Turner.

### STRAWBERRY PLANTS

WILDWOOD. -This strawberry comes to us from Iowa, and we offer it valuable addition to as a the list of home berries. It is too soft for long shipment, but for first early for the home table or home market I believe it is with-out an equal. The berry out an equal. The berry is of medium size of a bright scarlet color and has that much-admired flavor of a wild strawberry. It is one of the rankest growers on the farm, having almost covered the ground the past summer. through the principal growing season we were prac-tically without rain. It is very productive and a berry that I am sure will please everyone who wants early berries for any other purpose than long ship-ment. The name of this berry was suggested by its very delicious wild straw-berry flavor and the luxur-lant growth of the plants. Your garden will not be complete without a few plants of this excellent new variety.

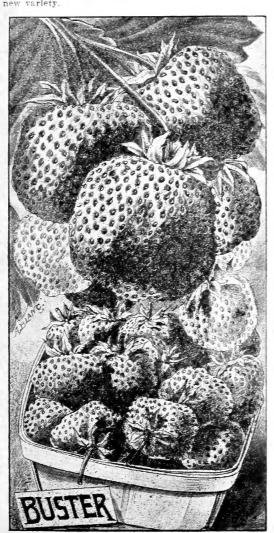

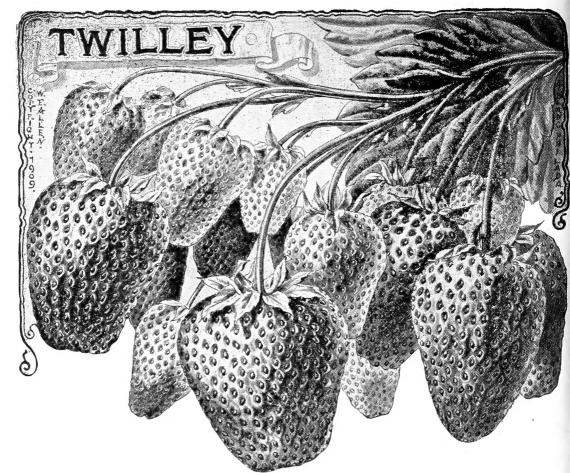

#### WILDWOOD

BUSTER.—Of Canadian origin and is said to be a cross of Sharpless and Bubach. As stated in previous catalogue, my attention was first called to this variety during the spring of 1906, when a late, heavy frost killed almost all other berries. Buster gave us a full crop. It is very vigorous and healthy, having a luxuriant, dark green foliage that defies a reasonable amount of dry weather. The fruit holds up large all through its long season. This is a good, reliable variety that I would advise my patrons to plant. I would not advise, however, that it be planted on thin, sandy land, as it will not do its best on such soil, but on good, medium, heavy soil it will please you from the time it starts to grow after you have set the plants until you have harvested your crop. It is large in size, bright red in ripening. The blossoms are pistillate, but extremely hardy. I especially recommend this berry to those who admire the Bubach type. One customer says: "We cannot speak too highly of the Buster; it is one of the finest berries we have ever grown." Another says: "The Buster seems to be the best of all. It made a very fine growth and seems to stand the dry weather better than any of the others." Another customer says: "I got Buster plants from you two years ago when you were out of Bubach. I am glad now that you were out of Bubach. I am glad now that you were out of Bubach. as I think the Buster far ahead."

FIRST QUALITY.—From Eastern Massachusetts and a seedling of the Sample. Produced by Mr. J. D. Gowing, the originator of the Sample. First Quality has made an excellent showing in plant growth and healthy foliage this season at my place, but I have not yet had the opportunity of fruiting it. It is claimed that First Quality will bear double the berries that can be produced from Gandy or Brandywine. C. S. Pratt, of Bracking Mass., claims that it will surely take the place of Marshall as a fancy berry. He says: "It will produce five times as much on the same space of ground. It is a great cropper, fine shape and colors well. There is something about the flavor which is claimed completely captivates the taste, and is a flavor that grows in favor." It is represented as a large berry, pointed somewhat on the order of flaverland. From what I have seen of plants set last spring I am very favorably impressed with it and shall plant out a good, large patch. I advise trying at least a few. It seems to be very promising, to say the least.

BEDAR WOOD.—The plants are very hardy and will produce a big crop of medium-size fruit that is rather soft for shipment. It has very long and large, coarse roots, which extend deep in the soil and enables it to endure dry weather better than most varieties. For this reason it will probably give better results than most others in very dry sections. The foliage is very dark green in color, very tall and has long, narrow leaves.

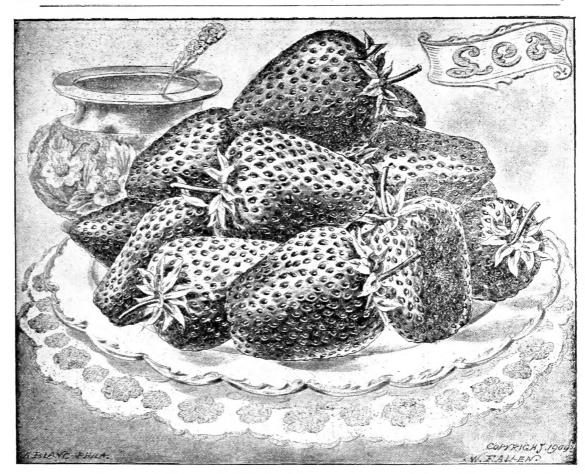

TWILLEY.—This new berry was offered for the first time in my 1910 catalogue. It has proven to be all that we claimed last year and in reality has exceeded my expectations. is healthy, makes large crowns and is a very per-sistent grower even in the face of unfavorable weather. During the last half of August and all of September, the six weeks when strawberries do their best growing in this section, we were practically without rain. Notwithstanding this, the Twilley has without rain. Notwithstanding this, the Twilley has nearly covered the ground, planted two feet apart in the row, with rows three and one-half feet apart, while many other varieties in the same field have made a very poor showing. The illustration above was made from a drawing with the fruit lying in front of the artist, and is therefore as correct as it could well be made. Large commercial growers who could well be made. Large commercial growers who have seen this variety speak in the highest terms of it. It is large in size, well colored, and what is very it. It is large in size, well colored, and what is very important to the commercial grower, it is exceedingly firm. I believe it will equal in this respect any berry that has ever been produced. The eating quality is also very good. The Twilley will hold an important place among the list of fancy strawberries whether wanted for the home garden or for distant commercial shipping. Time of ripening medium, late, I have an exclusive contract with the originator of have an exclusive contract with the originator of this berry for this year and next, and as there were very few plants sold last season I practically control the stock for 1911 at least, and as we made a fair crop of plants the past year we have dropped the price as much as possible and offer them this season at the same price per thousand as we sold them last year per hundred. The Twilley is a good plant maker and I believe will give general satisfaction to all who plant it.

SAM WHERRY.—Sam Wherry is a new addition to the strawberry family and hails from Mississippi, the home of the Klondyke, Red Bird, etc. Mr. S. E. Wherry is the originator and the berry is named for his father. Mr. Wherry writes me about this berry in March, 1908, as

follows: "I consider it the best strawberry grown or at least the best that it has been my pleasure to know. I also consider this the best berry grown for the commercial grower. I originated the Red Bird, and this far surpasses that good variety. The Farm and Ranch of February 15, 1908, speaks of this new variety as follows: 'Sam Wherry, a new variety, fruited three years and shows up better each year. It is a cross between the Klondyke and Red Bird. The plant is large, free from rust, vigorous and makes enough plants for fruiting rows if planted five feet in row. The bloom is phenomenally large. The berry terms red before it is ripe; very firm, extra large and prolific.' Last spring two big crops of berries and prolific.' Last spring two big crops of berries and blooms got killed by frost, and then it came out the third time and made as large a crop altogether as it has ever been my pleasure to gather." After reading the above article and receiving Mr. Wherry's letter I negotiated with him for some of the plants, and finally succeeded in buying 100 plants for \$15. They were received late, however, and at least three-fourths of them died. Those that lived made a few ronners, which were all set for plants, and from those I now have a stock of several thousand, which a very reasonable price while the stock lasts. The plants seem to be very healthy and a strong grower with me. I like the appearance of it very much but as what few plants I had to start with has been kept busy for propagating purposes I have not seem much of the variety, and only offer to those who wish to make a test of it. I can only say that it is a good.

SUPERIOR.—This variety is quite popular in some sections. The plants are strong, healthy growers, with dark, glossy green foliage, which succeeds on almost any soil, and is immensely productive of small to medium berries, which are firm and good shippers. Ripens about a week after Excelsior and continues to bear until late in the season. Originated in Delaware.

LEA.—This is another berry which we offered for the first time in our 1919 catalogue, and this has also made good. As an early market berry we believe it will very soon take front rank, and that as soon as enough plants can be produced to put it in the hands of the average commercial grower. This is an entirely different type of berry from the Twilley, although equal to it as a commercial variety. While the Twilley is a late variety, the Lea is early and the crop will be almost marketed when the Twilley starts. The Lea makes a strong, sturdy growth without a spot of rust, has perfect blossoms, very firm, very productive and ripens evenly all over at once without green tips, and is uniformly medium large in size, as represented by the above LEA. - This is another berry which we and over at once without given this, and is antiformly medium large in size, as represented by the above illustration, which well represents it. I consider the berry very promising, and shall plant as many plants as I can spare from my trade. This berry, as stated last season, was named in honor of my esteemed season, was named in honor or my season, d. Mr. Elisha Lea, superintendent of the N. Y.

last season, was named in nonor of my street friend, Mr. Elisha Lea, superintendent of the N. Y. P. & N. R. R. Co.

Mr. Custis, the originator, in writing of the Lea speaks of it as follows: "It was the best thing I had in the strawberry line. Climax produced a few more quarts, but did not bring near the money. The Lea's sold along with the Bubach, and will stand more rainy weather and keep in better condition than any bearry that I know. It is a vigorous grower of strong, berry that I know. It is a vigorous grower of strong, healthy plants and should not be allowed to mat too thickly on the rows for best results.

On account of the scarcity of plants my price on is variety last spring was rather high, but it is a this variety last spring was rather high, but it is a great grower, and this season we have a fairly good supply and, like the Twilley, we are offering it at the same price per thousand this spring as we asked per hundred last spring. One of Maryland's leading commercial growers, at my suggestion, visited Mr. Custis' farm for the sole purpose of seeing the Lea in fruit, with the result that he has ordered all the Lea plants that I can spare from my retail trade, which, however will only be a few thousand, as I must plant thirty or forty thousand myself. The Lea is a good market sort that you will not regret relative. planting.

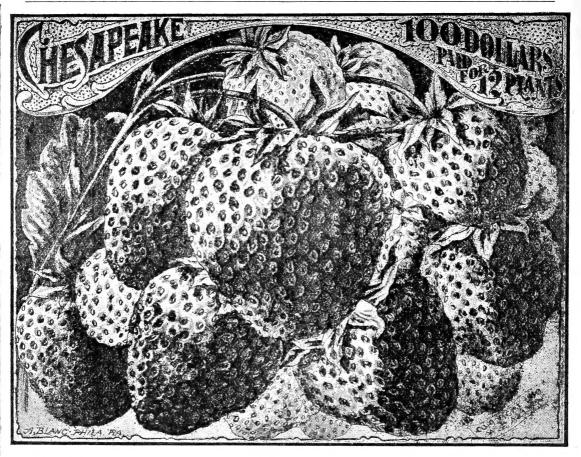

IDEAL.—This is a new berry sent out from Noble County, Indiana. I have not fruited this variety yet, but in plant growth it is entirely satisfactory. The originator's description is as follows: "If you want the best selling strawberry the best shipping and the best canning berry, car the Ideal and you will never regret it. It reget the Ideal and you will never regret it. It remains whole and keeps its shape when cooked, goes to market bright and crisp, does not bruise or discolor. The best looker in the boxes, the The best looker in the boxes, the best seller The soms are staminate or perfect, needing no fertiliza-tion. Season, medium to late. A very heavy cropper of large, uniform herries, holding up well in size until the last picking. The plant is a strong, vigorous grower, with clean foliage, free from rust; sends out large, heavy runners, making strong, thrifty plants, which has more good points than any other known variety."
The originator, Mr. Joseph W. Haines, further writes me, under date of February 21, 1910, as follows: "I have been growing strawberries for market for 45 years and bought nearly all new ones but never got anything to near compare with the Ideal, firmest berry I ever saw, and the des rather underdrawn than overdrawn." description

### **\*** IF IN DOUBT WHERE TO ORDER, READ THIS. Culpeper Co., Va., Feb. 1, 1910. IR. W. F. ALLEN, Salisbury, Md.

Dear Sir—The plants I got of you in fall of 1908 were certainly fine; I planted them and every one lived. They stood a drouth last year, while a lot of other plants I got from a neighbor died. Those plants have gone through bor died. Those plants have gone through enough to kill them, but they always pick themselves up and get about again. I would much rather have 100 of your plants than 1,000 of some I have seen. Wishing you the best of success, and hoping you will have a prosperous year, I am, very truly yours

G. H. LATHAM, JR.

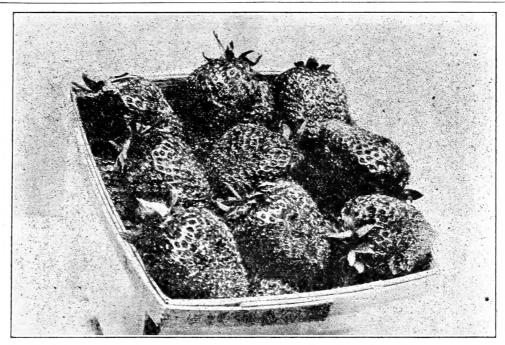

CHESAPEAKE. -This new variety. 1996, has made a great record. It is now being grown commercially all over the United States, and is giving the best results in every section so far as I have heard. Last summer I visited a number of prominent growers in Connecticut and New Jersey, and everyone put it at the head of the list. In truth, is another variety that is as perfect in form, good in quality and as firm I have yet to see it The Chesap ake is a chance seedling and its parentage is not known. The plants are large and vigorous; no rust and no weakness of any kind. The foliage is thick and leathery; upright leaf stems, with I aves almost round. The fruit is borne on large stems, the great proportion of which stand up, holding the fruit from the ground. The Chesawake bears more fruit on single stems than any variety I have seen The blossoms are perfect, fruit uniformly large, aver aging larger than the Gandy and, as compared with Gandy, it is more productive, firmer, better quality, without the green tips which are often found in that variety. In evality tranks with William Belt, Brunette and others of that class. It does not make a large amount of runners, but beds up just right to the best results in fruiting. It is unnecessary to give a long-drawn-out description of the Chesa-peake. I believe this entire catalogue could be filled with good reports from it, but I will close this de-scription by saying that it is one of the very best of the late varieties. If there is a better one, I have never seen it. Many others evidently have the same opinion of it, as it has taken more than 15 acres of plants last season to fill our orders on this one variety. It is positively one of the best.

BETHEL.—Under date of January 25, 1910, the introducer writes me as follows: "I am introducing a new berry this season, the Bethel. It originated near me and I have watched it growing for three seasons. I am now satisfied that it is going to take well. One of its strongest points is its shipping qualities, which will equal the Gandy." The originator further describes the Bethel in his printed matter as follows: "This new berry originated with Mr. R. F. Thomas, of Kent County, Delaware, who

has been growing it for the last four years. I have visited his farm and seen the plants in fruit, and seen him bring the berries to market and sell them, where he always received a fancy price. As this is a great strawberry section, where every farmer grows berries, this berry has caused quite a lot of comment. Many persons have tried to purchase the plants, but the originator has refused to sell until this season preferring to wait until the berry had been well tested and become well known. A buyer, who has handled the fruit to a considerable extent, describes it thus: "Immense size, fine shipping qualities, dark red color clear to the center, flavor unsurpassed. Has few equals as a table berry, a heavy cropper covering a long-bearing season, commencing medium early. The vine is a strong, unright grower, perfect blossom and free from rust." Evidently a worthy variety.

EKEY.—This variety has been on the market for several years. I have never grown it, however, until the past season and have, therefore, not fruited it, but we have received numerous instituted it, but we have received numerous instock. We find it described in M. Crawford's catalogue as follows: "Early medium and makes a short season. Originated with E. H. Ekey, of Southern Ohio. This fine berry has been before the public for four years and has won its way from the first. It makes plants sparingly, but they are of extra size and yields well. The fruit is peculiarly attractive very large, very long and very dark red and glossy; the flesh is also dark red and solid. The flavor is pleasantly tart, sprightly and agreeable." The Ekey has made a better growth with me than the above description would indicate; we find the plants strong, healthy and vigorous, as described, and enough of them. I am very favorably impressed with the variety, so far as I have seen it.

UNCLE JIM.—Another of the New York type.
Originated by James Dornan, of
Michigan. It is said to be a chance seedling and its
parentage is not known. It is a good, reliable variety and, while it came from an entirely different
source, I doubt if many growers could distinguish it
from New York, either in plant or fruit.

MASCOIT.—I offered this variety last season, but as I had never fruited it could not say very much personally as to its qualities. After fruiting it the past season I am prepared to say that it is one of the largest b rries that we are growing. The berries are of a beautiful, glossy red color, good quality and productive. The plants make a healthy, strong growth, with pl nty of plants. I see no reason why this would not become a popular standard variety. I picked a number of quarts where twenty-seven filled a basket heaping full. The illustration on this page is one of them. I do not know much about the history of this berry further than that it hails from Virginia and seems to be a strong competitor to the Gandy. It commences to ripen a few days earlier and continues to bear after the Gandy is gone. I was certainly very much pleased with the berry the past season and shall plant largely of it, and I would advise you not to fail to include this in your list.

WM. BELT.—There are a few lovers of strawberries that would not cross a plot and pick out the William Belt as the best fla-

vored. It is the standard for quality the country over. The demand for this variety has been much greater for the past few years, and we frequently dispose of every plant that we have and sometimes do not have though. A Washington grower says: "The William Belt and Chesapeake for flavor and good eating are dandies. I am going to run all my patch to these two kinds. They stood the drouth best and are in good shape now." Notwithstanding the William Belt is somewhat subject to rust, its popularity seems to increase right along, owing, no doubt, to its exceptionally good qualities. I find, however, that it does not rust as had now as it did a few years ago, and there are few amateur growers who do not include this in their collection. For fancy market and the home table it is indispensable. I know of nothing that approaches it in quality except Chesapeake.

BLACK BEAUTY.—This variety was received last scason from the originator and grown for the first time the past year. I therefore have not had an opportunity to fruit this variety yet, except on young plants, which gave us some very fine specimens of high quality. The originator describes it thus: "This plant is a result of eighteen years of scientific breeding, terminating in one of the grandest creations in the strawberry world. Berry rich, aromatic, sweet, firm and free from core. Conical in shape, large, even and smooth, dark red to center, and so rich in sugars and essential oils that it will remain sweet when left hanging on the plant several days after being fully ripe. A large, healthy, well balanced plant of the multiple-crown type: a splendid plant maker and very productive. Season late."

New York City, Feb. 15, 1910.

Dear Mr. Allen—It was fifteen years ago that I sent you my first order, and the way that or der was filled has captured an order from me wevery year since, the plants sent me at that time being so far superior to any that I had ever before been able to procure. I inclose an order for plants for the coming spring, and will ask you to kindly send your catalogue to my friend, who has recently purchased a home and has asked my advice in relation to a new strawberry bed. I have recommended your plants to him, telling him of my pleasant experience in dealing with you these many years. I have no doubt he will be happy to possess some of your unrivaled plants, and to be treated, as I know he will be, as fairly and generously as I have been. Sincerely yours.

J. O. STEVENS.

NEW YORK.—Originated by Martha G. Yates, of Slaterville Springs, N. Y., and introduced by me some 11 years ago. The New York has been steadily gaining in popularity until it is today one of the largest-grown varieties for the home worked. garden or local market. It is not firm enough to ship long distances, except under refrigeration. The berries are very large and some are rather pointed, while others are thick and broad. It is a seedling of the Bubach, fertilized with Jessie. The color is a beautiful scarlet, with a shiny surface. The seeds are so near the color of the berry and deeply set that they are scarcely noticeable. It is a strictly fancy berry are scarcely noticeable. It is a strictly lancy berry and a prize winner, just the kind to make the grower famous in his local market and give him the best trade. Small inferior berries have no show by the side of the New York, no matter how cheap they are offered. It is very prolific bears through a long season, but it does not matter how fast they ripen, as there are usually more exger buyers than can be supplied. Its excellent quality and wonderful productiveness make it very profitable to grow. The foliage is light green, a luxuriant grower and free from disease. The plant is one of the largest and healthiest on the place. Since its introduction in the place. on the place. Since its introduction it has become very popular, and it is seldom that we have plants enough to supply the demand, especially to those who order late. We have many glowing accounts of its superior quality from our customers, and if you have never planted the New York you should not fail to 

#### FROM PEOPLE THAT KNOW.

Summit Co., Ohio, April 9, 1910.

MR. W. F. ALLEN, Salisbury, Md.

Dear Sir—The plants arrived yesterday and your kind letter the day before. We thank you most sincerely. The plants are all right. It is your kind letter the way, most sincerely. The plants are all right. It is worth a great deal to be perfectly confident that those with whom we have business transactions will do the square thing every time. With kindest wishes for your success, we are, sincerely yours,

M. CRAWFORD CO 

NORWOOOD.—Originated in Massachusetts by N. B. White, who describes it as llows: "The Norwood was named and given first follows: "The Norwood was named and given first prize by the Massachusetts Horticultural Show at its exhibition in 1906. It is supposed to be a cross of the Marshall and Corsican, as it came up where the Marshall had been grown. The plants are strong, making a liberal number of strong runners, but not excessive. The berry is conic and regular in shape. The quality is unsurpassed and the size unequaled, some attaining the enormous size of three inches in diameter. Color, bright red all the way through, growing darker with age; it is firm, a good keeper and will ship well; has a perfect blossom and holds its size well through the season." My stock was obtained from the originator, for which I paid the nominal sum of \$40 per hundred. The first season I only made about 500 plants from this hundred, but I now have a fair-size stock and have put the price at \$5 per thousand. The Norwood as grown with me, at \$5 per thousand. The Norwood as grown with me, however, has not been equal to the above description by any means. It very much resembles the Marshall in plant and growth, and it is my opinion that if it is not the same as Marshall it is no better.

HIGHLAND. -Introduced by M. Crawford, Ohio, and a chance seedling found by Mr. T. M. Carlisle, of the same State. This variety has now fruited with me for the second time and it has now fruited with me for the second time and it gave an immense crop of fine looking, large berries. The fact is I am very much pleased with it and believe it will become a money-maker among the commercial varieties. It makes very large, healthy plants. The fruit is of good size, fine color and form. It is giving good results at the Experiment Stations and, so far as I have heard, is giving satisfaction among growers everywhere. We have not a large stock but would advise our enstowers to plant large stock, but would advise our customers to plant at least a few.

CHIPMAN.—Perf. ct blossom, medium early, a large, firm and good berry. The berries lay close to the ground under the foliage, and it is one of the best medium early. I am not giving a long description of the Chipman, but suffice it to say that I am planting it for market.

HUMMER -The Hummer is a big fellow, as its name would indicate, and hails Its exact origin is not known, but from Michigan. it is probably a seedling of the New York, as it resembles that variety in many respects. Some of our customers claim, however, that it is even more productive. With all of its other good qualities it is a grand, good berry, which is emphasized by the fact that we have seldom had plants enough to go around.

KLONDYKE.—Perfect blossom, vigorous grower, good crop of fruit, medium early, medium to large in size, well colored, with no green tips, and very firm. One of the best shippers, commands top price in market and frequently brings a premium over other varieties, owing in a great measure to its unusual firmness. The Klondyke is being planted more and more largely in the semitropical sections; it is also planted in all sections of the country. I think I would be safe in saying that there is a thousand acres of Klondyke growing for market within fifteen miles of Salisbury. If you want a good berry that will bring a top price in market and ship anywhere, do not hesitate to plant Klondyke.

KING EDWARD.—Originated by D. J. Miller of Ohio. The plants as grown here have made a very good showing. Large plants, large foliage and a free grower. The fruit is also large, good quality, moderately firm and productive. After fruiting it the past season I was very well pleased with the variety. C. S. Pratt, of Reading, Mass., has become very enthusiastic over the King Edward and he says: "The King Edward is to the strawberry what the Baldwin is to the apple. Concord is to the grape, the Barlett to the pear, etc." This is certainly very strong testimony. It is no doubt an excellent berry for most any purpose and. as stated above, I was well pleased with it the past season, although I do not think it hardly had a fair chance. Mr. Miller, the originator, is also very enthusiastic over his new berry and he says "The King Edward has been tested from the Atlantic to the Pacific. All things considered, it is the greatest berry I have ever grown, and I expect it to meet with great lave ever grown, and I expect it to meet with great success." I would advise all who read this catalogue to plant a few and try it for themselves, it may prove valuable to you.

NICK OHMER, —This is an Ohio berry that has now been on the mark to for a number of years. This berry has a strong, perfect blossom, and is productive of rich, dark glossy red globular berries, highly colored all the way through and of superior flavor. It is a great market berry and a superb variety for the home table. It does not seem to be a great favorite with the general mass of strawberry growers notwithstanding some of the larger growers plant it heavily. For the last two or three years it is becoming especially popular in the Southern States, Florida in particular, where it is largely grown for the Northern markets. For the last two years we have not been able to supply plants enough for these sections. In order to meet this increasing demand, we have planted more than usual and have a very fine stock for this season, and hope to be able to take care of all orders.

BOUNTIFUL.—This is a New Jersey berry, which has made excellent growth and looks very promising. It is said to be a seedling of the Glen Mary, crossed with the Clyde. The plants are large, vigorous and numerous, with dark green foliage: a good yielder of large fruit, which is showy and attractive, roundish, conical and sometimes slightly flattened. The flesh is red and juicy, moderately firm and of good flavor. Season, medium early. Worthy of trial.

RED BIRD.—After fruiting this another season I have nothing to take back from what I said of it last year. It gave us the first medium, large berries that were firm enough to ship. The vines grow like weeds, and unless kept thin will mat so thickly that they will impoverish each other, thereby causing the fruit to be small, but if kept from getting too thick they set a heavy crop of good-size berries that ripen early and carry well. The fruit will average larger than the Excelsior and with me will bear twice as much per acre, although I consider the Excelsior a fairly good yielder. It is a pistillate variety and the earliest pistillate variety that I know of. It can be fruited with Excelsior, Climax or Lea, and if grown thin, as above directed, it is a decidedly valuable market sort.

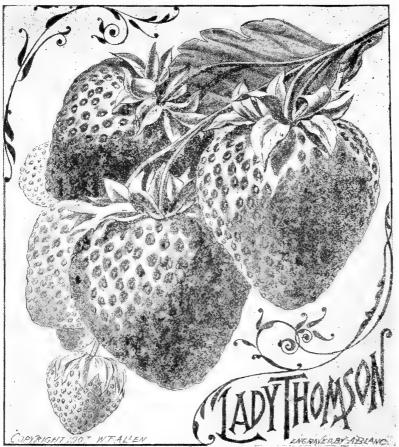

BRADLEY. Perfect blossom, perfect in growth, health and vigor of plants, perfect in color, uniform conical in shape, with some of the largest slightly flattened at the top. Large size and moderately firm, making it a good shipping berry. Exceedingly productive, yields with me over 5,000 quarts per acre on thin land without fertilization. I shall plant quite a few of the Bradley for fruit, which means that I have great faith in it. Do not fail to give it a trial, you will not regret it.

WARFIELD.—A well-known standard variety; very productive, mid-season, and especially popular in the West. Fruit of good quality and highly colored. A persistent plant-maker, and if not kept thinned out will mat so thickly it well be impossible for them to bear fruit of desirable size, but if kept thin will bear a good crop of medium size, highly colored and highly flavored fruit.

\* BEST HE EVER PLANTED.

Berks Co., Pa., April 8, 1910. Mr. W. F. Allen, Salisbury, Md. Dear Sir I received strawberry plants in first-class condition, and they were the best I yvery planted. Thanks. Yours.

\$ J. H. VAN REED. **\$** \***\***\*

MARSHALL. -Too well known to need any extended description. This is a berry that has been so popular in the New England perry that has been so popular in the New England market for years, where the grocers are always delighted to get it on account of its rich, dark red, glossy color, that is bound to attract and please customers. It is one of the richest-flavored strawberries grown. It is a strictly fancy berry, but not quite as productive as some other varieties. Its large size and fancy quality, however, will go a long way toward making up this deficiency. making up this deficiency.

ABINGTON. - Perfect blossoms, vigorous grower, ABINGTON.—Perfect blossoms, vigorous grower, moderately productive of large, firm, well color d berries, suitable either for shipping or for home use. A good berry that will generally give satisfactory results. Originated in Massachusetts by Lester Blanchard in 1905. It ripens with the Bubach, averages fully as large and holds out well through the entire season. In color it is bright red, with firm flesh and good flavor. With me it is moderately nonductive, but not immensely so. Mr. moderately productive, but not immensely so. Mr. Blanchard claims, however, to have picked 9,000 quarts per acre. It is an excellent variety to plant with Bubach to fertilize it and, in fact, to plant with any of the mid-season varieties.

ARMSTRONG. From medium to late in season; large size, good quality and perfect blossom. It seems to be on the New York type and somewhat resembles that variety. For several years it is claimed that it has been in the hands of German fruit growers in New York State, and that it was one of the largest and most productive betries grown in that section. I find it a very satisfactory variety, and, while there is some little difference, the description of New York fits this berry very nicely, both as to plant and fruit. both as to plant and fruit.

JESSIE.—We usually keep a few plants of Jessie in stock for a few of our customers, who refuse to give up this variety. Where the soil conditions are favorable the Jessie is an exceedingly fancy berry for either home use or market. It is ver choice as to the soil in which it grows, however, and for this reason many people have not seen it at its best. Where it succeeds it is fine.

LADY THOMSON.— The great North Carolina market berry. In the great strawberry growing section around Chadbourn, N. C., and other sections in the eastern part of the in the eastern part of the State this berry has been grown largely to the ex-clusion of almost every-thing else, thousands of acres of it having been grown in that section grown in that section. This does not mean that it will not do well in other of this in many other sections. It is more particularly adapted to the varmer climates than to the North. It makes healthy strong. plants that produce large crops of medium large, firm bercrops A remarkable market borry.

MAMMOTH BEAU-TY.—This has now fruit-ed with me for the second time and I cannot decide positive'y whether it is time and I cannot decide positively whether it is Paverland or something very near resembling it. I cannot say positively that there is no difference from Haverland, but there is any difference all the average grow but if grower all the average grower would never discover it. It was sent out by C. S. Pratt as a new variety. He claims that a grower in Massachusetts recommended the variety and mended the variety and claimed it to be one of the profitable varieties most in that section. W furnish this at the same Price that we furnish the Haverland, but it is my candid opinion that you will find it to be identical to that variety.

FENDALI. - Originated in Baltimore FENDALI.—Originated in Baltimore County, Md., by Charles E. Fendall. We fruited this variety the past season and was very much pleased with it. The originator describes it as follows: "It is a very strong-growing plant, with luxuriant light green follage that is very attractive. The berries are as large, if not larger, than any other variety and are very fine in flavor. The berries are perfect beauties, rich in color, smooth and glossy, with long stems and very large caps. The plant and fruit are bound to command attention wherever seen. It is a good variety that should not be overlooked. It is a good variety that should not be overlooked.

CLYDE.—The Clyde is an immensely productive variety, with fruit nearly or quite as large as Bubach. It would be a very popular variety over a wide range of country but for the fact that its foliage sometimes gives away about fruiting time and is not sufficient to protect the immense crop of fruit. This can to some extent be guarded against by an application of rithrest of sode in the spring before an application of nitrate of soda in the spring before fruiting. The Clyde has been largely grown in Kentucky and seems to have been a favorite, and is even now with many growers.

EARLY HATHAWAY. -Under favorable conditions I find this gives a very good crop of excellent berries early in the season. It is a strong staminate variety and is a good one for fruiting early pistillate varieties.

### <u>፟፟፟፟፟፟፟፟፟፟፟፟፟፟፟፟፟፟</u> ALLEN'S PLANTS GIVE SATISFACTION IN INDIANA.

Floyd Co., Ind., April 25, 1910. Mr. W. F. Allen, Salisbury, Md. Dear Sir—I am well satisfied with straw-MR. W. F. ALLEN, Salisbury, Mu.

Dear Sir—I am well satisfied with strawberry plants I received of you last year, and I have a good prospect for berries. I am well placed with the blackberry plants. You can count me as a customer; when I need plants I will give you my order. Your plants have given satisfaction all over our county; I have not heard of one complaint. Yours very truly.

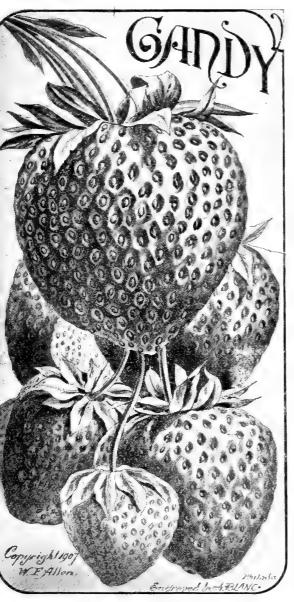

F. L. WATKINS.

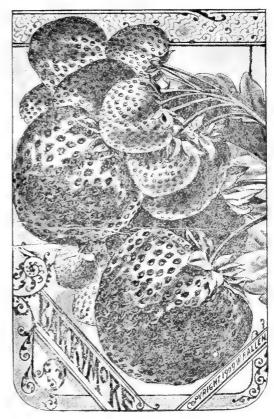

**፟**፟ቝቔቔቝጜቝጜቝጜቝጜቝጜቝጜቝጜቝጜቝጜቝቜቝቜቝጜቝጜቝጜቝጜኯ፞፠

GOLDSBORO .- Perfect blossoms, foliage strong. glossy. A good grower and productive of large, hand-some fruit; very smooth and glossy, fine quality, especially recommended for home use or near mar-ket. A good, handsome berry that will make your mouth water for it and not disappoint you when you eat it. Too soft for distant shipment.

GILL. -This is an early variety, uniform in shape. GILL. -This is an early variety, uniform in shape, nearly round and above the average of the early varieties in size. It colors all over and becomes quite deep red when full ripe. The flesh is light red and has a pleasing flavor. The growth with me has been entirely satisfactory. It makes larger and stronger plants than most early varieties, entirely free from disease. No rust spots have appeared on it on my grounds. Well worthy of a trial.

GANDY. -Too well known to require any tended description. It is the standard tended description. It is the standard two variety by which all other late berries the country over is compared. Probably no higher compliment could be paid the variety than this. It should be planted in black swamp land if possible, otherwise in clay land of a springy nature; never on dry, sandy land. We always have a big demand for this variety, and for that reason have propared a large stock of it. At this time it is without doubt one of the most largely planted of the late varieties.

BARRYMORE. - Hails from Massachusetts and

My attention was first brought to the variety while visiting Boston during the fall of 1907 and a year later succeeded in getting a few plants at the modest price of \$100 per thousand. The Barrymore has made a good showing with us, both in fruit and plant and indications are that the modest and indications are that price of \$100 per thousand. The Barrymore has made a good showing with us, both in fruit and plant, and indications are that it is going to make plant, and indications are that it is going to make good. During the Massachusetts Horticultural Show, in 1908, the Barrymore was awarded silver medal and three first premiums, which is quite a record for any new berry for one season. The color is a glossy, rich, dark crimson, with red flesh of excellent quality. The berries are large, ripens at midseason and are regular conical shape. The blossoms are stammate or perfect, and fruit is firm enough to ship well.

AROMA. -A popular berry in the West, where it is grown by many in place of Gandy. The berries are large, firm, attractive and good quality. We have generally considered it a poor grower, but this season we have an excellent stock, it having grown better than any other variety, perhaps owing to the fact that it was planted in a piece of springy, rich land. Heretofore we have usually been unable to fill a great many of our orders on Aroma: I am pleased to say, however, this season that we have a splendid stock of this Western favorite and will be pleased to have orders from anyone who wants good plants of Aroma.

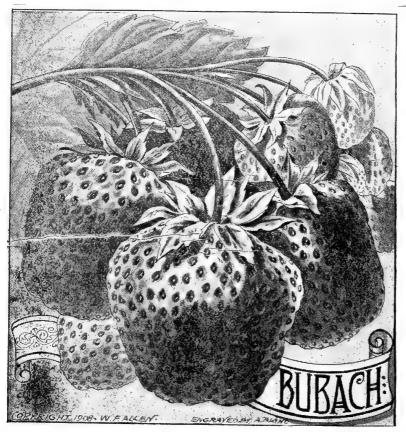

ENHANCE. This is an old variety of excellent

ENHANCE. This is an old variety of excellent ENHANCE. This is an old variety of excellent origin that we sometimes have call for from the Pacific Coast. Berries are somewhat irregular in shape, large, firm and late in season. Its blossoms are rich in pollen and it is valuable for planting with pistillate varieties. The foliage is a very rich light green and, while I have grown it for fiftern years, I do not remember of ever seeing a spot of rist. spot of rust.

\* LARGER ORDER NEXT TIME.

Jefferson Co., Ohio, April 25, 1910.
Mr. W. F. Alley, Salisbury, Md.
Dear Sir I received the strawberry plants all in good condition; the people were all well pleased with them. Will send you a larger order now time. Yours tryly der next time. Yours truly

ISAIAH J. DOUDS. **\*\*\***\*

OOM PAUL.—The fruit is large, the larger berries being sometimes a little flattened. The berries are dark red all the way through, firm and good quality. I see no reason why this variety has not been planted more largely. I have fruited the Oom Paul for several years and consider it a good variety either for home use or market, as it is firm enough to ship well.

PARSONS' BEAUTY.—Parson's Beauty originated in this county near Parsonsburg. It is very productive, medium large and of good quality. Anyone who has a near market, where the fruit can be hauled in or picked one day and sold the next morning. I would recommend this variety. Some claim that it will ship well, but I have never found that I could recommend this as a berry that would ship a long distance and give good results. It makes a luxuriant growth of dark green, vigorous plants, which bear an immense crop of medium to large berries.

FEMNSYLVANIA DUTCHMAN.—This is a nother another. The birty comes to me from the Keystone state from one of my customers, who writes me thing: "I have a new berry that has no name and eleven or twile will fill a quart. In the Harrishurg market they have been bringing 25 cents per low when the rest were only 8 cents. They have purfect blossoms and are firm. No one has them except one party supply you with some if you wish to buy them and I will supply you with some if you wish to buy them and I will soll them to you and no one else." I bought the plants and was well pleased with them. The plants were year large, as large as any I base ever seen but, as stated above, the light green, healthy foliage and the fruit is very much like New York.

WCCLVERTON.—Introduced by the late John Little, of Ontario Canada. I have fruited this variety for a number of r ars. It will succeed on almost any soil, but will do better on a sandy loam where the soil is not too dry. The plants make a good growth, has a nerfect blossom, which makes it an excellent nollenizing variety. It is no uncommon thing to see blooms and rice herries on this variety at the same time. A good, reliable standard variety.

BUBACH.—I will speak of this variety by first asking how many of the older customers is there that does not remember Bubach or, as it used to be called, Bubach No. 5, and I want to ask further how many of the older customers is there that have seen many if any, better berries than the Bubach was when it was first put on the market, and right here I want to say that I have a very fine strain of this grand old variety that I think is just about as good as the Bubach was in its earlier days. I have heard some complaints, and especially from nurserymen, that they could not get it to bed up, and yet our Bubach plant beds are just about two feet across, with as fine, luxuriant, healthy growth as you will find in almost any variety in this section. I heard a prominent Connecticut nurserymen make the remark two or three years ago that he had discontinued growing the Bubach because it would not make the plants and because there had ceased to be a demand for it. This, however, has not been my experience, and the strange part of it is that I self many thousands of Bubach plants all around this man and throughout his State. It must be that his soil is not adapted to the variety. The fact is

be a demand for it. This, however, has not been my experience, and the strange part of it is that I sell many thousands of Bubach plants all around this man and throughout his State. It must be that his soil is not adapted to the variety that I have kept it among my leaders, and only once in ten years have I failed to sell every plant that I had. My present stock will exceed half a million and I doubt very much if there will be a plant left. "The Bubach were by far the finest berries and brought the best price. In my experience of strawberry growing for fifteen years I have never seen any berry to equal the Bubach" is the verdict of one customer, and we have many similar ones. We have a very fine stock of Bubacb plants and will be pleased to have the orders of all customers who admire this variety.

SARATOGA.—Originated by William Palmer, of New York State. It makes a vigorous growth of healthy, vigorous plants, of very dark gr en foliage. Mr. Palmer describes it thus: "I exhibit d the Saratoga at the New York State Fair in September, 1906. One plant set in May, 1906, with ordinary field culture, had twenty-five good berries and several small ones. A portion of three acres was of this variety, cared for the same as the balance of the field. One picking at the height of the season yielded at the rate of 5,000 quarts per acre, maturing the last of the crop with Gandy. It has a perfect blossom and is a cross of the Glen Mary and Sample, two of the leading all-around herries in this action. The fruit is deep red, a good shipper and medium to late in season."

OAK'S EARLY.—This is a very early. firm shipping berry. It originated in Somerset County, Md. Some think it better than Excelsion. It is, to say the least, probably equal to that variety, equally as early, equally as vizorous in growth, equally as productive and equally as sour.

Washington Co., Okla.

MR. W. F. ALLEN, Salisbury Md.

Dear Sir—I want to thank you and give you credit and praise for the best plants that can be had at any price. Thanking you for your hon success, I beg to remain, very respectfully yours.

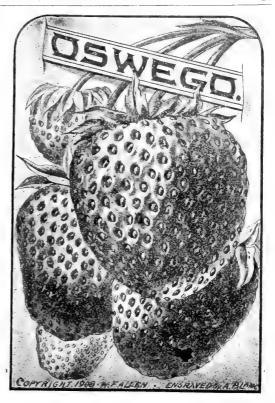

R. J. NARORS

MELLIE.—This is an Arkansas variety, and is claimed to be a cross of the Warfield and Lady Thomson. It is described by the originator as being early to mid-season and a pistifiate. "The Mellie is my great mid-season cropper." says the interdependent of the control of the cont As delig is my great mid-season cropper, says the in-troducer; "a gant in filling crates and one of the most productive varie ies ever tested on my farm. At the Ohio Experiment Station on the test plot it At the Ohio Experiment Station on the contract ranked second in productiveness and only missed first place by one-eighth of a quart out of ov hundred kinds. It resembles Warfield in color shape, but is superior in size, and has not the defect of too short fruit stems, like the Warfield, that make hard picking. The Mellie is an immense yielder of hard picking. fine berries.

QUALITY. -Another variety from the Geneva Experiment Station. Selected from a lot of 197 seedlings of Hunn by Atlantic after an eight-year trial. I know very little about this variety except that it has made a fair growth, and only offer it for trial at your own risk.

EARLY OZARK -Believing this to be a very valuable variety, we had quite a large lot of them planted last spring and we are very much gratified that we did so. The plants are making an excellent showing, being among the thriftiest and most promising of the early varieties. We are receiving good reports from it from every source. A number of prominent commercial growers have pronounced it a valuable market berry. The variety was sent out by Mr. Charles Shull, of Missouri, and is a cross of the Aroma and Excelsior. Our demand for this variety has been very large, and for that reason we have had but little opportunity to valuable variety, we had demand for this variety has been very large, and for that reason we have had but little opportunity to fruit it here, but when grower after grower pronounces it to be good we feel that that is recommendation enough, as the disinterested commercial grower, who grows strawberries only for market, is not likely to misrepresent the quality of any new variety. The growth of the Early Ozark has a distinct luxuriant appearance entirely its own. The foliage stands up erect, the leaves are thick and leatherly, of a distinct dark green appearance, which makes it appear as though it had been varnished. The berries are very firm, average large size and early; in fact, it is claimed to be the largest very early in fact, it is claimed to be the largest very early berry yet produced. My own observation is that it is no earlier and no larger than St. Louis, but there is no earner and no larger than St. Louis, out there is this difference, which means everything to the commercial grower: It is firm and the St. Louis is soft. We have a very fine stock of plants this season of the Early Ozark, which I am pleased to be able to offer much lower than heretofore.

OSWEGO.—Claimed to be a seedling of the Bubach and Sharpless. Berries are large, bright crimson and ripen about with the Sharpless. Blossoms are perfect; season late. It originated in an old family bed and attracted attention for its large size and its ability to produce a large crop of berries under neglect. It was transferred to the family garden and grown there for years before it finally attracted the attention of commercial growers. Plants are large, vigorous, producing a number of young plants, while the old plant is inclined to bush up much like the Parker Earl. Taking everything into consideration, it is very much like New York both in growth and fruit.

PRIDE OF CUMBERLAND. -Originated in New Jersey. The berry is brilliant red and holds its luster and freshness a long time after being picked. It is very The berry is brilliant red and holds its luster and freshness a long time after being picked. It is very attractive, and always brings the highest market price. Where everything is favorable it is productive, very firm and good quality. It is a strong, staminate variety and an excellent variety to plant with medium to late pistillate sorts. Were it not for the fact that its blossoms are easily injured by unfavorable weather I think this would be one of the leading market herries. ing market berries.

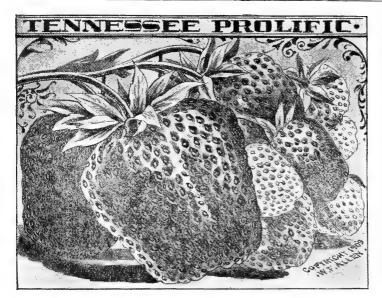

SPLENDID. -A very productive variety of uni-form, medium size. This is an-SPLENDID.—A very productive variety of unform, medium size. This is another variety that must be kept thin in order to keep it from getting too thick on the row for best results, as it surely will do if left to have its own way. It has a strong, staminate blossom, and is a good one for pollenizing such pistillate varieties as Warfield, Crescent and others of that type.

Cumberland Co., N. J., May 25, 1910.

MR. W. F. ALLEN, Salisbury, Md.
Dear Sir—My father, Mr. Edward Paynter, got some Chesapeake and Virginia strawberry plants from you two years ago and he is more than pleased with them. They are certainly fine berries, and come up to all you claim and nne berries, and come up to an jou claud aud praise of them. You can't say too much of these berries. We got more for them than any other berries. Last summer, when others could not get 50 cents per crate, we got \$2.75 a crate. Yours truly,

HARRY W. PAYNTER. 

NORTH SHORE, "This is another of Massachusetts origin by the well known and noted strawberry grower, Benjamin A. Smith. It is an exceedingly hard berry, one that will ship almost any distance. It is of fair quality and large size. It makes a splendid growth of large, broad leaves, healthy plants, which bear a fair crop of fine berries. Season is very late. Those who are looking for a very fine shipping berry very late in the season will do well to try this. I would recommend planting it in heavy, rich soil, as I do not think it would give satisfaction in thin land.

KEVITT'S WONDER.-Originated in Jersey. This riper...
n Mary. Plants short about the same time as Glen Mary. Plants short and stalky. Berries bright red, with a long neck. Very firm and of long shape. The originator recommends it especially for home use. It does not dowell at all with me; makes a poor growth and produced a proper seen seen. duces a poor crop.

#### WE ARE ADVERTISED BY OUR FRIENDS

McCracken Co., Ky., March 22, 1910.

Dear Sir—I received the strawberry plants and I am well pleased with them. I have been a strawberry plants for twenty years, and have and I am well pleased with them. I have been buying berry plants for twenty years, and have none as fine as yours; they could not be beat. The expressman made the remark that they were the best-packed plants he ever saw, and wants to see some of the berries when they bear. I will always buy from you and recommend you to my neighbors. The plants certainly were fine. Very truly, FRANK SANDERS. **፟ቝጜቝጜቝጜቝጜቝጜቝጜቝጜቝጜቝጜቝጜቝጜቝጜቝጜቝጜቝቝቝቝ**፟

STEVENS' LATE CHAMPION. -Evidently a d escendant of the Gandy, which originated in New Jersey. It is a much better grower than the Gandy and will thrive on a greater variety of soils. In some sections it is a great favorite and largely grown. In a recent trip to Competicut I found to Connecticut I found a great many acres in this variety, and it seems to be giving general satisfaction. On my light land it is not a favorite with mealthough it has done much better the past season

EXCELSIOR. —A standard for earliness which all others are compared The berries are about medium in size, very produc-The berries are about medium in size, very productive and firm; one of the best shipping berries on the list. If given half a chance, it will take care of itself and bring splendid returns. It is too sour to suit the taste of the average person and has, therefore, never been popular for the home garden. As a first early shipping berry it has few equals and is decidedly the best of the old standard extra early market sorts, and if there is a variety that will give ripe fruit earlier in the season, year after year, I have not yet found it. have not yet found it.

than formerly.

TENNESSEE PROLIFIC.

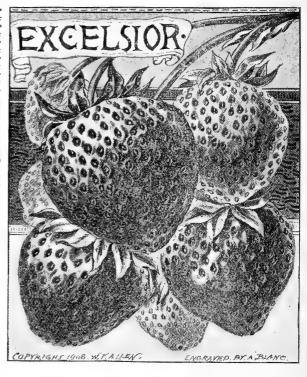

TENT ESSEE PROLLIFIC.— Perfect blossoms, fine grower, productive: large size, moderately firm and popular with many growers. One of the best staminate varieties to plant with medium early and medium pistillate kinds. A good, reliable sort that has many friends.

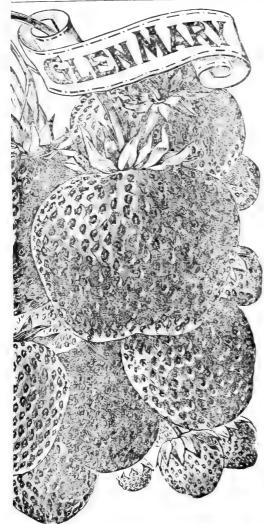

SILVER COIN. -I have not fruited this variety yet, but it has made an excellent growth and promises well. The introducer speaks of it as follows: "The most pro-lific, large strawberry: the larg-est year, prolific strawbeary." est, very prolific strawberry. The quality is grand; rich, full, sugary and very aromatic. Its brilliant flame-red color remains unchanged after the berries soften. It is very firm, keeps in good condition from three to five days. The plants are strong, free days. The plants are strong, free from rust and blight. The blossoms are large, with lots of pollen. It has been thoroughly tested for several years and its merits proved by actual, practical tests. Originated in New Jersey, and coins gold for those who plant it for market." who plant it for market.

BLAINE. - This variety mid-season to late

and hails from Iowa. It produces, strong healthy plants, with rank foliage, a liberal number of runners, and large berries of fine color and flavor and very firm. The New York Experiment Station report very firm. The New York Experiment Station reports asys "that it retains its size well throughout the season and has a marked, desirable character." I have heard it claimed that the Blaine was similar to Gandy. Not having fruited the variety here, I would not like to express an opinion at this time. would not like to express an opinion at this time. The foliage has very much the appearance of the Gandy, but it has made double the growth the Gandy has made in an adjoining patch under similar conditions. One grower, who claims to have fruited it two years, says: "It is as large as late and twice as productive as Gandy." It is claimed to be a cross of the Bedar Wood and Lovett.

JOHNSON EARLY.—Medium early, very fine quality, but will not succeed on light, sandy soil. It seems to be at its best in stiff clay land.

GLEN MARY. -The Glen Mary has now become too well known to need a lengthy description. Originated in West Chester, Pa., and introduced by myserf in 1906, it has become one of the leading standard varieties throughout New England, the Middle West and the Northwest. I doubt if there is a more popular berry throughout this vast region than the Glen Mary. This variety has never seemed to wane in its popularity since its first introduction. One customer from Connecticut says: "I have found no plant to come up with Glen Mary, taking all sides of the question into consideration." Another customer from Ohio says: "Glen Mary is the berry for this State." Another customer reports: "I have grown the Glen Mary for several years and find it my most profitable variety." Another customer from New Jersey writes: "It is the only variety with which I have made a success." Another writes: "I do not know why, but we have tried several varieties and none of them seem to do as well as the Glen Mary." The Glen Mary is only semi-staminate, but as its blossoms carry enough pollen to fruit its own berries it is listed as a staminate variety, but I would not recommend it to plant with pistillate varieties as a pollenizer. The berries are big, dark red beauties, with preminent seeds of bright yellow; the meat is rich and juicy and crimson in color. They are of such high flavor that when once caten more are wanted. As a good, firm shipper it is very popular; for fancy local market there are few, if any, better, for this reason they are popular with both the large and small growers. It has no particular soils and does not require petting. The roots are long and well developed, providing plenty of moisture during a drouth. The foliage is large, upright in growth, dark green in color. A good, safe berry for everyone to plant in the section named.

OREM. -This variety is sent out by M. Crawford Company, of Cuyahoga Falls Ohio, but seems to have originated in Maryland. As I have not fruited his I will use the originator's description, which is as follows: "The Orem is a vigorous grower and has fine foliage to protect the bautiful terries from the hot sun. It comes in with the Gandy and bears an abundance of fine berries long after the Gandy are gone, and bears about three times as many as the Gandy. The berries are exteedingly large and smooth, light red with yellow seeds and dark green caps which makes them very attractive. Bing very firm it can be left on the vines two or three days after they are ripe and still be in first class shape for market."

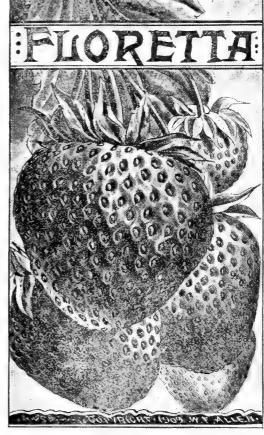

Mn. W. F. Allen, Salisbury, Md.

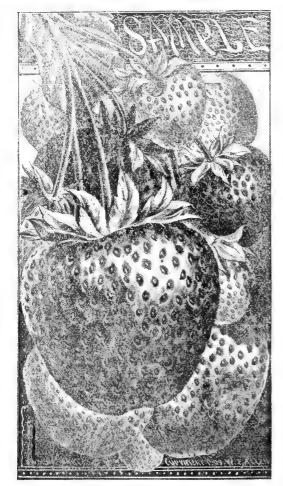

Dear Sir—My plants arrived in due time and in excellent condition. I saw plants at the express office that came from other nurseries, but they were in no way equal to mine. Yours truly.

HENRY G. SCHULENBURG.

�\*�\*�\*�\*�\*�\*�\*�\*�\*�\*�\*�\*�\*�\*�\*�\*�\*�

FLORELLA.—This is a Southern berry from Georgia and originated by a Mr. Brown. The Florella is thought to be a cross of Bubach and Lady Thomson. It has a beautiful dark green follage, entirely free from rust, and its root system is splendid, sending out large, fiberous roots to a great distance. The berries are large to very large, crimson color and fine flavor, and almost as perfect in form as if each berry were molded. Fruit stems are long and stalky, which hold the berries up well from the dirt. The season of ripening is nearly as early as Lady Thomson, and its firmness commends it to the commercial grower. For the three or four years that I have been watching this variety here it has made a very satisfactory showing of fancy, large, round, conical berries that could hardly fail to bring the highest market price.

SAMPLE. Or ginated by J. D. Gowing, of Reading. Mass. It has become one of the standard berries throughout the country. As I have stated in my previous catalogue, I was favorably impressed with this berry the first time I saw it and unhesitatingly paid \$200 for 1,000 plants. I have never been sorry for this purchase, as I was one of the first to get it, and it has become a great, standard varlety, one that seems to give satisfaction over the whole country. It is a good berry for the experienced grower and a safe one for the inexperienced. It has been termed by some as a mortrage lifter; at any rate, it is too good to be omitted by large or small growers. It has extra large blooms for a pistillate variety, and it is so hardy it is seldom damaged by frost. The berries are large, bright red and have a smooth, glossy appearance. The Sample is not only one of the most beautiful late berries, but one of the largest and most prolific. The berries lit is seldom necessary to sort them even by those who practice doing so. It is an excellent shipper, a good canner and a good, all around berry. One grower writes: "The Sample is as near my standard of large, fancy berries as can be grown." Another says: "The Sample and Glen Mary were a little the best of any on my place." Another customer from Massachusetts writes: "I am trying to grow the best berries that can be put on the Milford market, and I am coming pretty near doing so with the Sample."

SENATOR DUNLAY.—This is unquestionably the very best of its class. Originated in Illinois by J. R. Reasoner and named for Senator Dunlap, of the same State. Mr. Reasoner claims that the Dunlap has started to entricle the globe, and from the demand that we have had for plants for two or three seasons past I guess he is about right. My own trade on this variety extends from Canada to Cuba and from ocean to ocean. I fruited the berry for several years and find it one of the best medium size, mid-season vari-

eties. The Dunlap is one of those healthy plants that, if given half a chance, will look out for itself wherever you plant it. It is a variety that be ginners that know practically nothing about strawberries can depend on. The berries resemble Warfield in color and ripen about the same time. It has a perfect blossom and is a better berry than the Warfield, better able to resist drouth and less liable to be injured by continued rainy weather during picking season. The foliage is tall, upright, with a long leaf, and has more than the ordinary power of developing a heavy crown system. It has an extra long flowering season; the bloom is handsome and exceedingly rich in pollen, which makes it very valuable to plant with such pistillate kinds as ripen in its season. Its long roots go down into the sub-soil for moisture, and a severe drouth has less effect on this berry than any others. The fruit is dark red, with a glossy finish, shading to a dark scarlet on the under side, with prominent yellow seeds that look like gold embedded in highly colored wax. The meat is bright red all through and is exceedingly juicy. For a medium size, very productive, mid-season berry, if in doubt do not hesitate to plant Senator Dunlap.

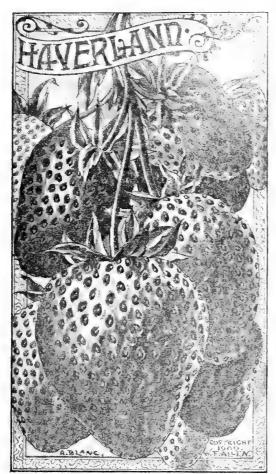

PAUL JONES.—This is a pistillate variety, and is claimed to be a seedling of the Haverland and Brandywine. This is certainly a parentage that should produce a first-class strawberry. It is said to have originated ten years ago, and has been thoroughly tested in different soils with all kinds of treatment and has never been found wanting. It is claimed to be wonderfully productive of beautiful berries, and the most wonderful of all will keep a week and be just as handsome as when first picked. Of a brilliant, glossy color, which seems to have a varnished surface, and is claimed to be an excellent shipping variety. It is claimed that berries kept a week in a common house cellar were exhibited at the Worcester County Horticultural Society by the side of fresh-picked berries, and the only difference in appearance was the added richness in coloring of the week-old berries. It is said to be fully as productive as Haverland or Sample. It have not fruited the variety yet, but it has made an excellent showing in the field so far as growth is cone uned, making a good quantity of strong, healthy plan s.

#### THE RESULT OF TRYING TO PLEASE.

Chenung Co., N. Y., May 13, 1910.

Dear Sir—I received the Glen Mary plants yesterday. They were the finest plants and put up in the very best condition of any I ever received. Yours, JARED FOULKE.

HAVERLAND.—Although the Haverland was introduced over twenty-five years ago, it is still one of the leading commercial sorts and seems to be growing more popular every day. It is among one of the most popular varieties that we handle, and of the older ones we have the largest sale for it from year to year than of any variety on our list; some seasons it is impossible to supply the demand. This year we have a very large stock of this variety and we expect to be able to fill all orders. Last year we expected to have enough and perhaps some to spare, but every plant of Haverland was sold. It is a good, standard berry that bears a big crop above medium size, quality and ap pearance, a berry that anyone who is in doubt as to what to plant would make no mistake in planting. It seems to do well in nearly every part of the country. Several years ago I asked my customers to vote on the most popular mid-season variety; there was twice as many who named the Haverland as their preference as there was any other kind. The plants are healthy and vigorous, making ample runners. The blossoms are perfect, medium in size and extremely hardy. The Haverland should be well mulched, as the fruit stems are not able to hold the immense load of berries from the ground. It is so enormously productive that the bright, large, juicy berries lie in great heaps around the plants. Under favorable circumstances the larger berries will grow as large as guinea eggs. Of course, under ordinary culture It will not be as large as this, but the average size is usually satisfactory under almost any conflictions. It is popular everywhere, and we have seldom, almost never, had any complaint from this variety. It is a good one to the to and a safe one for the inexperienced.

HOWARD. —Perfect blossoms, superb growth of vigorous, healthy, light green foliage; very productice, season late. I have fruited the Roward for several years and have always been very well pleased with it. It is a good variety.

AMANDA. "The Amanda hails from Ohio, and was sent out has season at \$5 per dozen. The plants have made a very good showing here, but we have not seen this variety in fruit; I will, therefore, give the description of the originator, which is as follows: "A sa dling of the Sauple crossed with Maximus. Bisexual, or perfect dowering, with lots of pollen. The berry is extrem ly large, with form varying from he top shape to thick and broad; in color it is a deep red. The flesh is deep crimson and rich, with a fire, mild flavor. Firm and good for canning, as its holds its color well after being cooked. Foliage extra large and vigorous, free from rust; makes plenty of good, strong plants, with deep roots, thus standing droath well. It is very productive, the berries holding their large size well to the end of season. Spason medium to late.

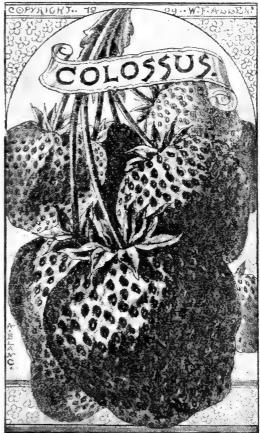

#### 

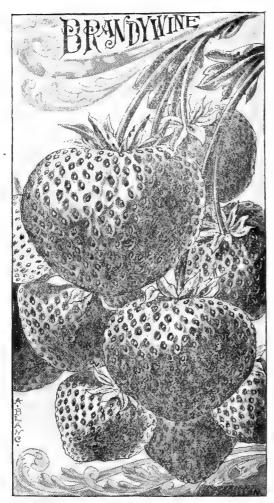

Hamilton Co., Ohio, April 10, 1910
Dear Mr. Allen—Plants arrived Monday in good shape, and if they don't grow it will not be your fault, as I consider them extra fine plants. The asparagus roots came in fine condition. Yours very truly,

GEORGE DEPENBROCK.

collossus.—After fruiting this again the past season I am really more favorably impressed with it than I was a year ago, and as stated in my 1910 catalogue, perhaps the most comprehensive description that I could give of it would be to say that it reminds me of the Bubach as the Bubach was 20 years ago. Plants are vicorous, herries large and lots of them. The Collossus is said to be a seedling of the Bubach, and I do not doubt, as it bears much resemblance of that variety, but seems to surpass it in vigor, size and productiveness. I advise all those who have admired the Bubach in its younger days to plant the Collossus now, and I predict that everyone who does so will be well pleased

with the results

BRANDYWINE.—The Brandywine has now been before the public for about eighteen years. This is a variety that thrives on almost any soil and usually gives good results. This berry was originated in Pennsylvania. It seems to do equally well in semi-tropical sections and is one of our largest sellers in Florida. Cuba, California and Bermuda; in fact, this variety seems to give particular good satisfaction in these semi-tropical sections. In fact, it is a variety that seems to grow well, fruit well and give satisfaction generally in almost all sections. It is one of the standards that can be relied on.

NEW HOME.—Of Western origin and introduced by me several years ago. For one reason, for which I cannot account, this berry has not become popular except in a few instances. Before introducing this variety I grew several remarkable fine crops of fruit. They were such that I considered it at that time an exceedingly valuable variety. It seems, however, that it does not keep up its reputation from home, and to those who have not already planted it and know whether or not it will give satisfaction I would advise planting it only in a small way. Where it succeeds, as it has done here, it is certainly a valuable market berry.

KANSAS.—Originated in the State from which it takes its name. Fruit rather above medium in size and immensely productive; color bright brilliant crimson, not only on the surface, but through and through. It is one of the most fragrant of strawberries. Plant is free from rust and disease. I hear excellent reports from this variety and especially on the Pacific Coast, and I shall be pleased to have my customers in that section give it a trial. I do not mean by the above description that it is not a valuable variety in other sections, as one of the best crops I ever grew was of this kind.

MITCHELL'S EARLY.—Originated in Arkansas. For eating from the vines after it is full ripe there is probably nothing better, and until the Excelsior came it was the leading early market berry in this section, as well as for home use. If grown on good soil, it must be kept thin or it will go too much to vines. Too well known to need further description.

CARDINAL.—Originated in Ohio by Mr. George J. Streater, and introduced by the Templin Company, of the same State. It makes a vigorous growth, very productive, very firm and handsome. It looks so well and yields so well, and, being easily grown, it is claimed to be one of the most profitable market varieties in Ohio. The berries average large and are bluntly conical, with a bright green cap that holds up remarkably well after shipping. It possesses the solidity of the old Wilson, united with the vigor of plant, prolificacy and brightness of color of the famous Crescent, while the berries are larger than either. Season, medium to late; blossoms, pistillate.

COMMONWEALTH.—This is a Massachusetts berry, orignated by Jas. Monroe, of near Boston. I have fruited this berry and find it bears a good quantity of firm, farge berries. A variety that I recommend for the North, but not for the South, as I think it is more adapted to Northern sections, and for best results should be given rich soil and high culture. When these conditions are met it is a very fancy berry. The plant is a strong grower, but not so rank as the Marshall, and makes a fair amount of good, healthy plants.

CRESCENT.—For many years this was to strawberry culture what the Early Rose potato has been to potato culture. There are quite a good many grown yet, but not so extensively as formerly. About twenty years ago it was the most largely planted of any variety in this section, but later has given away to a great extent to other varieties. Many growers in the West, however, are still planting the Crescent. It produces great crops of fine berries, and those who have never grown it have missed one of the best medium to late varieties.

FAIRFIELD.—Season of ripening about the same as Excelsior, Mitchell's Early and Hoffman. It is somewhat larger than either of these and not quite so sour. The plant is a strong grower of healthy foliage, much resembling the Haverland.

EARLY HARVEST.—The Early Harvest has not fruited here; was planted last spring for the first time. It comes from Arkansas and is described by the originator as follows: "The Early Harvest is not a full staminate and requires pollenation, for which the Excelsior is well fitted. It is very productive and forms immense tops and roots, with numerous crowns on good soll. By many it will be preferred to the Excelsior because it is very nearly as early, with as good color and firmness, and excels it in size and productiveness."

DICKIE.—Hails from Massachusetts, and was originated by J. D. Gowing, of that State, who also originated Sample and who has recently given us First Quality. For those who do not object to an uneven surface the Dickie will no doubt give satisfaction. It is a large berry of excellent quality, but is very uneven and irregular in shape. It is a berry that will give good results for the home table. The foliage is rank, healthy and strong. Blossoms perfect.

HOFFMAN.—An old Southern market berry, which has been noted especially for its carrying qualities. Medium size, early and very firm.

SHARPLESS.—This is an old favorite and a good many are still asking for it, especially to plant in the garden for the home table. Too well known to need further description.

### 

Page Co., Va., April 6, 1910.

MR. ALLEN.

Dear Sir—The strawberry plants received. I will have to say you are a man after my own heart, as the more I deal with you the better I like your way like your way of doing business. I never saw a finer lot of plants in all my life; well rooted, vigorous and strong. Wishing you much success, I remain, yours very truly, D. K. CAVE.

<del>◆\*</del>◆\*

CLIMAX. -This variety has been planted over a wide range of territory and has given general satisfaction. It is a berry that no one need hesitate to plant. If you have not decided what to plant for second early, you are generally safe in planting Climax, although, like all other varieties, there may be some sections where it will not do as well as some others. This is undoubtedly one of the best second early varieties coming in three or four days after such varieties as Excelsior, Mitchell's Early, etc. It is very productive and holds on for a long season. Climax is supposed to be a cross of the Bubach and Hoffman. The foliage is of a light green color that can be distinguished from other varieties for quite a distance. The plants are strong and vigorous, making an upright growth, and show no sign of rust. But few varieties ever put on the market have sprung into prominence quite so fast as Climax. wide range of territory and has given have sprung into prominence quite so fast as Climax. Our sales for three or four years have run from 600,000 to 800,000 plants annually, which indicates the general popularity of the variety. With few exceptions our customers from all over the country speak well of it.

VIRGINIA. —Originated on the Eastern Shore of Virginia, from which State it takes its name. It has fruited with me for several seasons. In points of earliness it is three or four days behind Excelsior; in some tests it has proved equally as early. The Virginia is very productive of good size, early berries. While it is not of the firmest, it is firm enough to make a good shipping berry, and being uniformly of good size and of a bright, glossy red color it can be depended on to bring good prices in market. It makes the best appearance in the crate of any medium-size berry that I know of This is said to be a cross between the Hoffman and Sharpless. The plants make a good growth, with plenty of runners, which never show any rust. One grower from Idaho says: "The Virginia produces a great crop, so much so that I set out this fall all the plants I had." A Vermont grower writes: "The

Virginia and Marshall were the best of all for fancy prices. The originator claims to have produced 12,000 quarts per acre. It is an all-around good berry and should be grown in thinly matted rows, and will do better on medium stiff or springy land than on light

SAINT LOUIS.—Originated in Arkansas by A. Bauer. This variety grown here makes a very strong, healthy plant, Arkansas by J. plenty of runners, and very productive of large berries, considering the early season at which they ripen. They ripened with me the past season fully as early as the Excelsior or any of the other very early varieties. The berries are about the same shape, as early as the carly varieties. The berries are about the same shape, fully as large and almost, if not quite, as productive as the Haverland. But for one weakness I would prefer this berry to any of the early berries I have ever seen. It is more productive of large berries averaged and the same shape. ever seen. It than any other extra early sort that I have ever grown and I have had about all there has been introduced of any importance for twenty-five years. The one thing that keeps it from taking first place as an early berry is the fact that it is too soft, which practically takes it out of the market as a shipping variety, but for the home table or the local market it is the largest very early variety.

JIM DUMAS.—Originated in Arkansas and introduced by Louis Hubach. Louis Fruited in a small way last season and made a very good showing. It is a great plant maker, with large, healthy foliage. The introducer describes it in the following words: "This splendid variety I believe following words: "This splendid variety I believe is destined to achieve as great a success as the Excelsior and become a general favorite all over the country. The plants have strong, healthy foliage and stiff, long roots. It is a good plant maker and has never shown any sign of rust or blight. The berries are large and perfect in form. It succeeds on either clay or sandy soil.

PROLIFIC.—The Prolific originated at the Geneva Experiment Station in New York State, and is said to be a cross of the Sample and Marshall. This variety was sent out in 1908. I will quote the station's description: "Plants very numerous vigorous unusually readulating vigorous properties." I will quote the station's description: "Plants very numerous, vigorous, unusually productive, yielding on the station grounds at the rate of 14,000 quarts per acre. Fruit very large to above medium, retains size well as season advances, roundish conic to blunt wedge shaped, attractive bright scarler; flesh firm. On account of its vigor, the great productiveness of its plants and the attractiveness of the large, well colored berries, this variety gives promise of taking front rank among standard commercial strawberries."

I have quite a nice lot of plants and will be pleased I have quite a nice lot of plants and will be pleased to supply those who wish to try this new variety.

THREE W'S.—Originated in Tennessee. It is said to be a chance seedling found growing along the railroad. The foliage is beautiful, clean and healthy and very attractive. The fruit is large, fine quality and productive, covering a long season, from medium early to late. It is quite firm and a great shipper. The plants are very large and stalky, amply able to produce a big crop. Our stock of Three W's this season will not be near enough to fill all orders and, owing to the limited quantity, it has been necessary to make a small advance in the price.

GOOD LUCK.—Hails from New Jersey, has perfect blossoms and one of the greatest plant makers on the farm. Foliage, luxuriant light green. Berries, large size and moderately productive; season late.

#### WE WILL TRY TO HAVE THE LARGE ORDER REACH YOU FULLY AS GOOD.

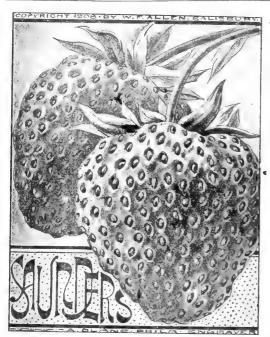

Gloucester Co., N. J., April 8, 1910.
MR. W. F. Allen, Salisbury, Md.
Dear Sir—My plants came in excellent condition and are all looking fine. Am thinking of sending you a large order next spring if Providence permits.

Respectfully,
W. CLARENCE MISKELLY.

#### NORTH OR SOUTH, EAST OR WEST, AL. LEN'S PLANTS GIVE SATISFACTION.

Androscoggin Co., Me., April 28, 1910. -I received the strawberry plants in Dear Sirgood condition. Yours respectfully, RALPH B. FRENCH.

**፟፟፟፟፟፟፟፟፟፟፟፟፠ቝ፠ቝ፠ቝ፠ቝ፠ቝ፠ቝ፠ቝ፠ቝ፠ቝ፠ቝ፠ቝ፠ቝ፠ቝ**፞ቚ**ቚ** 

SAUNDERS.—A good, reliable, old, standard, staminate variety that you can usually depend on. One of the best to plant with posibiliate varieties. Will usually do well on light soll and yield good crops. Medium large and productive. Originated in Canada.

GOLDEN GATE.—Originated in Massachusetts by S. H. Warren, who is a good judge of strawberries, and was largely instrumental in bringing the Marshall before the public. mental in bringing the Marshall before the public. The Golden Gate is a strong grower, with numerous plants of luxuriant dark green foliage. It has a strong staminate blossom, with lots of pollen, which produces strictly fancy, large fruit clear to the end of the season. It has a rich crimson color, with no green tips. The variety is probably better suited to the North than to the South, and I feel confident that it will give satisfaction throughout New England, the Middle West and the Northwest.

GOVERNOR ROLLINS .- Originated in Massa-H. Smith and named in honor of Governor Rollins, of H. Smith and named in honor of Governor Rollins, of New Hampshire. The plants are medium size, making a healthy growth of thick, dark green leaves. Governor Rollins took first prize at the Massachusetts Horticultural Show in 1907. The fruit is firm, large, perfect in shape, dark red in color and very fine quality, and holds up well until the last picking and matures all of its fruit. It is a productive and promising variety. promising variety

HERITAGE.—Berries uniform, large, beautiful in shape, splendid color, delicious flavor. It is medium firm and makes a big yield; HERITAGE. -Berries uniform. navor. It is medium firm and makes a big yield; blossoms are staminate or perfect and have a rich green cap, which adds very much to the appearance and market value. Originated in New Jersey, where there was so much good said about it that I bought quite a few plants and put it in stock two years ago. It is one of the healthiest and strongest growers on the place. Customers in the vicinity of its origin speak in the highest terms of it.

LONGFELLOW.—This variety has a perfect blossom and the season is claimed to be from early to late. The introducer describes the Longfellow "as very large and producing the largest number of uniform hig berries of any variety of its season. In form it is very long and of a perfect strawberry type. In color it is dark red, the rich, deep redness extending from circumference to center. The flavor is rich and sweet, texture firm, making it an excellent market variety."

OHIO BOY.—This is a new berry sent out by
A. A. Eppert, of Ohio, for which
he claims great things. Mr. Eppert says it would

take a small newspaper to give all the good points of his new berry. Among other things, he claims it to be very hardy. The variety has made a good showing in plant growth with us this season, but as we have not fruited it yet I shall have to wait until another season before giving a very definite description. From what I have seen of it I should judge it was worthy of trial judge it was worthy of trial.

METEOR. -A comparatively new variety METEOR. —A comparatively new variety from
Massachusetts, originated by Charles
Lunt. The originator claims it to be almost frostproof. He also says it is more productive than the
Sample and that he gets from 5 to 8 cents more per
quart for it in the Boston market. It is a new variety, well worthy of a trial. The blossoms are pistillate and very hardy. While the plants receive no
special care over other varieties, its vigor and health
of plants are quite apparent of plants are quite apparent.

MIXED PLANTS.—It often happens that in taking up a large quantity of plants to fill hundreds of orders that sometimes we will get up more of some variety than are needed we will get up more of some variety than are needed at that time to fill orders. It also sometimes happens that we will have a row or two in the field that will get mixed, which we cannot use for filling straight orders. To those who are willing to set this kind of plants, knowing that they have some of the listed varieties, but not knowing which they are or which they are getting, we are willing to make a very low price, had we can usually fill a limited amount of orders of this kind and will accept orders for mixed plants at \$2 per (housand.

#### WILL DO OUR BEST TO MERIT YOUR APPRECIATION.

Howard-Co., Ind., April 16, 1910.

Dear Sir—Strawberry plants received yesterday in fine shape. The plants were really better than I expected; they were packed in fine shape. You will get more orders from me next year; I like your way of doing business. Respectfully, O. A. THOMAS.

#### A RECORD WORTH STRIVING FOR.

Moore Co., N. C., March 24, 1910.

MR. W. F. Allen, Salisbury, Md.

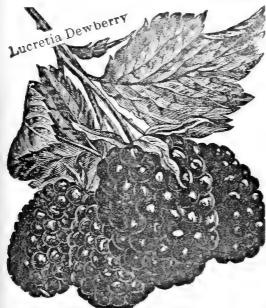

Dear Sir—I have been a strawberry grower for thirty-five years and I have bought plants from many nurserymen, but have never received plants packed better or arrived in better condition than the lot just received from you. Very truly yours,

W. H. GOLDSMITH.

**፟ጜቝጜቝጜቝጜቝጜቝጜቝጜቝጜቝጜቝጜቝጜቝጜቝጜቝጜቝጜቝጜቝጜቝጜ**፞ቝ፟፟ጜ

OUR DESCRIPTIONS. -The foregoing descripplants are true to the best of my ability to describe them. The varieties that I have fruited or seen in bearing I have given the description as I have seen them. This is no guarantee, however, that any variety will prove to you exactly as I have seen there. If I have not seen the variety in fruit, I have quoted the best authority at hand. There is no much variation in strawherry growing that it is nearliested. quoted the best authority at hand. There is so much variation in strawberry growing that it is practically impossible io describe any variety in such a way that the description would fit under all circumstances and in all localities. A variety that will give good results one season will very often fail the next, and a sults one weason will very often fail the next, and a variety that is not so good this year will frequently be better another season. Moreover, a variety that does well and proves satisfactory in every respect on one man's soil will not on some others, and vice versa. The descriptions, therefore, are given to help customers the best we can, and are intended to describe the varieties generally as we would expect them to do under favorable conditions. It would be impossible to tell any person just what any variety would do in this particular case. We still recommend, as we have done for years, that every grower of strawberries should plant a few of the new varieties each season and test out for themselves just what will do best for them before investing a large amount will do best for them before investing a large amount in untried varieties that he knows nothing about. This will not only prove interesting, but may save you a good many dollars and guide you to plant what will please you the best, as no one can tell you in every instance just what will be best for you to plant. The best that can be done is to give you general information and name you varieties that would generally do well under the most varied conditions.

### Dewberries

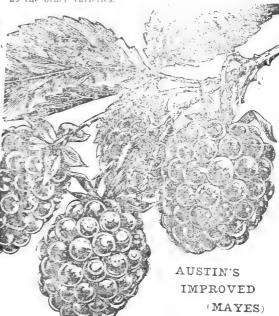

LUCRETIA ....ost largely grown of all the dewberries for market. It is earlier than the earliest blackberry and as large as the largest of them. The blackberry and as large as the largest of them. The canes are very hardy and exceedingly prolific, thriving almost everywhere; of slender, trailing habits and entirely free from disease and insect attacks. The fruit is superb, large and handsome, jet black, rich and melting. It is probably the best shipping variety of all the dewberries in cultivation.

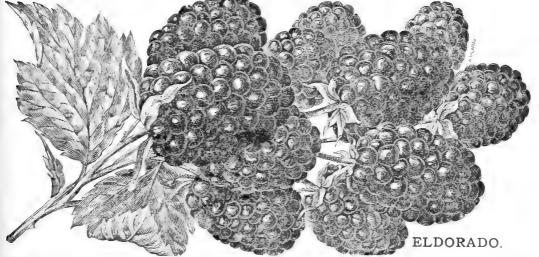

AUSTIN'S (MAYES).—An early dewberry of excellent quality. It produces large crops, but the berries lack firmness for long shipment, hence valuable chiefly for home use or local market. If, however, they are kept picked up close as soon as ripe and not allowed to stand too long on the vines, they may be shipped a reasonable distance, and prices will usually compare very favorable with other varieties, as you get extra early fruit, which is in be ter demand. The berries are large and thick. Canes vigorous, hardy and productive. Ripens with me about a week earlier than Lucretia, and for this reason is

valuable to grow in connection with that variety. I always plant about one-third of my field in Austin's and he balance in Lucretia. It is very hardy and seldom fails to give a good crop.

Dewberry plants should be planted very early in the spring, as they start to grow early, and the sooner they can be planted the better. Any time when the ground is not frozen is suitable for planting them, even in the winter. In sections where there is no one weather during the winter they Ing them, even in the winter. In sections where there is no open weather during the winter they should be planted just as early as possible in the spring. Do not wait until very late in the season and then blame the plant grower if your plants do not do as well as you expected. We can fill your order any time after you receive this catalogue. You will no doubt notice that we have left off Premo and Chestnut dewberry from this catalogue. We have left out Premo because we have not the stock and Chestnut because it has not proved to be as valuable as the other varieties. as the other varieties.

ELDORADO. --Possibly the best known of all blackberries the country over, and perfectly reliable in every way. It is a good grower and hardy every-

where. The berries are of good size, glossy black, and very sweet and tender; they retain their luster a long time after being picked. This variety was dis-

covered by E. M. Buechley, of Southwestern many years ago, and it is unquestionably one of the finest blackberries in cultivation. Highly recommended for all sections.

EARLY HARVEST. -Berries medium in size, bright, glossy black, sweet and tender. It succeeds admirably in the South and is a favorice on the Pacific Coast, but it is said to be entirely hardy north of New Jersey. Extremely early and very productive, rendering it profitable and popular.

MERCEREAU. —Foliage large, abundant MERCEREAU, —Foliage large, abundant and entirely free from rust. Early to mid-season, large size, good flavor. The berries are sparkling black, which adds greatly to their market value. The canes are exceedingly strong, upright in habit of growth. We can only offer this by the dozen and hundred, as we have not a large stock.

RATHBUN. -This is evidently a seedling of the Wilson, and has all the vigor and productiveness of that once popular variety, with berries equally as large, beautiful and firm, ripening at the same time as its supposed parent, wich all of its good qualities of keeping, shipping, etc. It is a native of Western New York and is heartier than the old Wilson. Time of ripening early, being in advance of all other varieties, except Early Harvest and others of that class. Its large size and carliness makes it especially valuable.

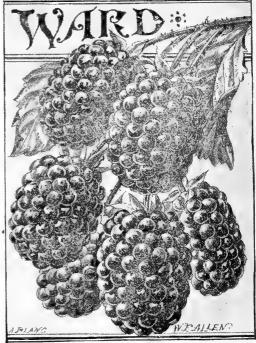

Berries of mea--Aance, literally cov-ffs great SNYDER.—Season early. Berries of medium size, but are borne in great abundance, literally covering the bush with sweet and juicy fruit. Its great hardiness of cane renders it valuable for cold climates and hence popular for planting in the North as well as in warmer sections.

ICEBERG. -Plant crop this season a failure. No plants to offer until spring, 1912.

WARD.—This is a variety of great merit, and one of the largest used for commercial purposes. It has now been fruited for a number of years and bears large crops annually. It was found growing wild in New Jersey. Its fine fruit, strong canes, clean, healthy foliage, loaded with enormous crops of large berries, always attract attention. Free from rust, vigorous and hardy. A seedling of the Kittatiny and closely resembles it in color.

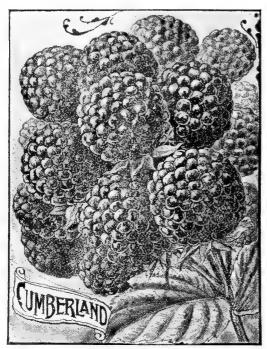

DIOWEDS—A well-known veriety from West.

BLOWERS. -- A well-known variety from West-

ern New York. A sturdy grower and a very prolific bearer. The fruit is large and continues to ripen through a long season. The plant is hardy in its native region and has endured quite a low degree of temperature unharmed. Since 1904 the Blowers has been distributed widely throughout the country, and so far only one report of winter killing has been received and that from Northearn Minneeste. received and that from Northern Minnesota.

## Raspberries

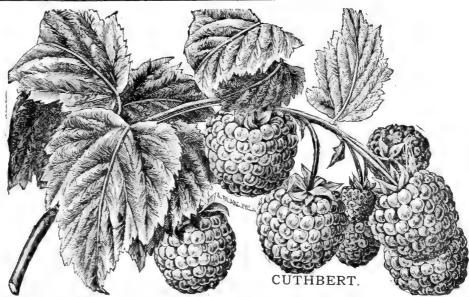

CUMBERLAND (Black).—One of not the very best, of all the blackcaps. One of the best, if

hardy and productive. Size of fruit, the largest of the raspberry family, far surpassing any of the other sorts. The berries run seven-eighths of an inch in diameter, and they are of such handsome appearance that they are sure to bring the top of the market. It follows Palmer and Souhegan and precedes Gregg in time of ripening, making it a mid-season variety. The bush is exceedingly healthy and vigorous, throwing out stout canes. In all orders for black raspberry plants the Cumberland should be one of the varieties.

KANSAS (Black), —For a good, second early blackcap there is nothing better than this. It possesses all the valuable attributes of a profitable market sort, and its large size and attractive appearance the sort, and its large size and attractive appearance insures for it always a ready sale and good prices. The fruit is nearly as large as the Gregg and with much less bloom, handsome, firm and of fine quality. Its canes are of strong growth, entirely hardy and prolific, with tough, healthy, clean foliage. Its season is about second early, later than Souhegan, but much careful in them Creekler. earlier than Gregg.

BLACK DIAMOND (Black). — This variety is extremely popular in Western New York, where it is largely grown. It is unsurpassed for evaporating. The fruit is almost as large as the Kansas and of sweet, sugary flavor. In this we have a very superior early blackcap, one producing fruit of large size, firm and of high quality, with a prolific cane of strong growth and iron-clad hardiness. It is said to be the sweetest of the black raspberries, has few seeds and is a firm, good shipper.

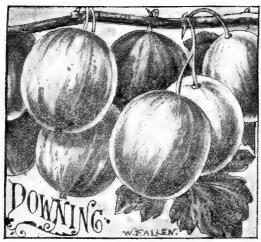

COLUMBIAN (Purple).—This variety is sometimes listed as a red variety, which, however, is not entirely correct. The berries are more of a purplish color. The Columbian is a variety of the Shaffer type, of remarkable vigor and productiveness. It is very hardy and propagates from tips. Fruit very large, often an inch in diamter, shape somewhat conical, color dark red, bordering on purple; adheres firmly to the stem and will dry on the bush if not picked; seeds small and deeply imbedded in a

rich, juicy pulp, with a distinct flavor of its own, making it a most delicious table berry. This is without doubt the most valuable purple cap yet produced, as it is more hardy in cane and certainly more prolific than any other sort with which I am acquainted. For canning purposes it is undoubtedly one of the very best raspberries in cultivation, yields an enormous crop and is perfectly hardy, probably the easiest grown of all raspberries. Those who have failed with other varieties will be almost sure to succeed with this.

CUTHBERT (Red).—This is a variety that I can unhesitatingly recommend either for the home garden or for market. I doubt very much if there is any variety that will surpass it. For all purposes it is unquestionably one of the best, if not the very best, of the red raspberries of its season. It is a strong grower, with healthy foliage, and on good soil it is very productive. It is one of the old, standard, reliable sorts that will give a good crop of large, red berries, and it is probably more largely grown than any other variety in this country, whether for market or home use. The berries are of large size, a good scarlet color, firm, good quality, sprightly and rich. The Cuthbert should be included in all orders for red raspberries.

KING (Red).—This is undoubtedly the best of the early red varieties, and unites earliness with large size. Bright scarlet color, flesh firm, good quality and productive. It makes a vigorous growth and is very hardy. Its lively, bright color and firmness makes it a favorite with those who grow red raspberries for market. It is very hardy, standing, cold and heat where many others fail. Scarcely too much can be said in favor of this variety.

## Gooseberries

DOWNING.—One of the oldest and most remarkable of the large fruiting varieties. Handsome pale green and splendid quality; fine for both cooking and table use. A vigorous grower and usually free from mildew.

**PEARL.** —A cross between Houghton and some large English variety. Very hardy, free from mildew, and superior in size and quality. It is claimed to be more productive than the Downing and resembles that variety quite a little.

JOSELYN (RED JACKET).—This variety has been well tested over a wide range of territory and has proven very satisfactory. It is a heavy cropper and has bright green, healthy foliage. An American seedling of large size, smooth, prolific and hardy. Quality among the best.

MOUNTAIN SEEDLING.—This is a new variety, with unusual vigor and great productiveness. It is slightly larger than Houghton, and seems to have all of the good qualities of that variety. It makes heavier canes and holds the foliage longer than anything on the place.

HOUGHTON.

## Currants

PERFECTION.—This is a new variety, very highly recommended, and is said to be a cross of the Fay's Prolific and White Grape. The color is a beautiful bright red. Size of berry and cluster as large or larger than Fay's Prolific; very productive, season of ripening about the same as Cherry, habit of growth intermediate between Fay's Prolific and White Grape. The Perfection was awarded a \$50 gold medal by the Western New York Horticultural Show; also received high award at the Pan-American Exposition and a gold medal at the St. Louis Exposition.

RED CROSS.—This is a large and productive variety, and undoubtedly one of the best currants, if not the very best, on the market. The mass-s of fruit are so dense as to cut off the naked cames from view. The Rural New Yorker described this variety as being the best of all old or new currants for midseason. One proof of its popularity is that we sell more of this variety than anything else on our list. It has a mild, pleasant flavor. It is a vigorous grower and is very productive.

grower and is very productive.

FAY'S PROLITIC.—Less acid than Cherry, bunch large, berries medium, bright and sparkling. One of the leading red varieties and a remarkable cropper

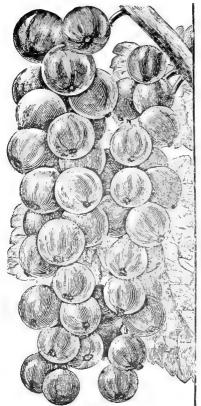

WILDER.—One of the strongest growers and most productive. Bunch and berry large, bright, attractive red color, even when dead ripe. Hangs on bushes in fine condition for handling as late as any known variety. Ripens at same time as Fay's and hangs on bush much longer; fully as prolific. It is one of the most popular varieties both for table or for market.

for market.

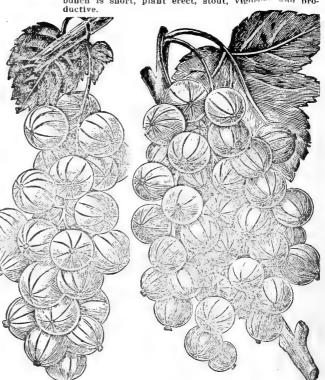

WHITE GRAPE.—This is the largest and most productive of the white varieties. Flavor sweet and very fine for the table.

**POMONO.**—Of good size and flavor. Bright red and long stemmed, hanging in fine condition long after ripe. Bears early and abundantly.

CHERRY. - Very large, deep red. rather acid, bunch is short, plant erect, stout, vigorous and productive.

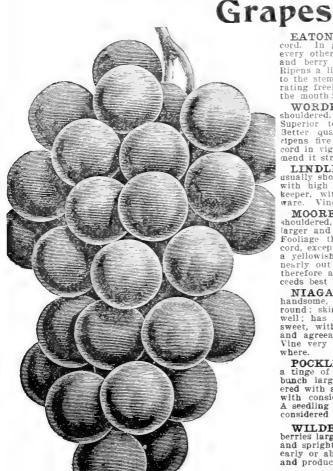

President Wilder

Red Cross

Fay's Currant (reduced)

#### MOORE'S EARLY

WYOMING RED (Red).—A very early red grape. Bunch small, compact and handsome; berries small to medium; skin bright red, thick, firm; fruit sweet, somewhat foxy, but agreeable to most tastes. Vine a very strong grower, very hardy and healthy, foliage small, thick and leathery. Its chief points of merit are its health and earliness.

CONCORD (Black). —Early; decidedly the most popular grape in America, and deservedly so. Bunch large, shouldered, compact; berries large, covered with a rich bloom; skin tender, but sufficiently firm to carry well. Succeeds everywhere.

CAMPBELL'S EARLY (Black).—Cluster large and shouldered, moderately compact, very early and productive. This is claimed to be the finest grape that has ever been produced in a long time. It makes a strong, healthy, vigorous growth, with abundant, thin, healthy foliage. Quality about the same as Concord.

DIAMOND (White). — Bunch large, compact, shouldered; berries large, round; skin thin, but tough; flesh tender, spicy, with but little pulp. Vine a good grower, with thick, healthy foliage; hardy and productive; very fine quality. Ripens a little before Concord.

DELAWARE (Red).—Compact bunch, very delicious; always brings the highest price in market and always considered the best for home use. Berries small; skin thin, but firm. Ripens with Concord or a little before. It should be in every garden.

EMPIRE STATE (White). — Bunch medium long, compact; berries medium, quality best; vine a strong grower, hardy, with a large, healthy follage and short-jointed canes, which ripen early. Superior in quality to Niagara.

EATON (Black).—Similar in foliage to Concord. In growth health, hardiness of vine and in every other respect its equal, while in size of bunch and berry it is much larger and more attractive. Ripens a little earlier than Concord. Adheros firmly to the stem; skin thin, but tough; pulp tender, separating freely from the seeds and dissolving easily in the mouth; very juicy.

WORDEN (Black).—Bunch shouldered, compact; berries very large; skin thin. Superior to the Concord in the following points: Better quality, larger berries. mare compact, and tipens five to ten days earlier. Fully equals Concord in vigor, health and productiveness. We recommend it strongly.

LINDLEY (Red). — Bunch medium long, not usually shouldered; berries large; flesh tender, sweet, with high aromatic flavor of best quality. A good keeper, with firm, tough skin. Ripens with Delaware. Vine healthy, vigorous and hardy.

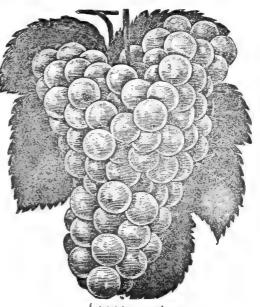

MOORE'S EARLY (Black). — Bunch rarely shouldered, not quite as large as Concord; berries larger and very much like it in flavor and quality. Fooliage thick, leathery, somewhat resembling Concord, except on the under side, which is covered with a yellowish brown down. Ripens so early as to be nearly out of the market before Concord starts in, therefore a very popular early market variety. Succeeds best on rich soil.

NIAGARA (White).—Bunch very large and handsome, often shouldered, compact; berries large, round; skin thin, tough, does not crack and carries well; has not much pulp when fully ripe; melting, sweet, with a flavor and aroma peculiarly its own and agreeable to most tastes; ripens with Concord. Vine very vigorous and productive. Succeeds everywhere.

POCKLINGTON (Pale Green).—Usually with a tinge of golden yellow where exposed to the sun; bunch large, very compact; berries very large, covered with a beautiful white bloom; flesh juicy, sweet, with considerable pulp. Foliage large and healthy. A seedling of the Concord, ripening soon after it, and considered its equal in quality.

WILDER (Black).—Bunch large, shouldered; berries large; skin thick and firm; flesh sweet, tender and sprightly, pleasant flavor; a good keeper. Ripens early or about with Concord. Vine healthy, vigorous and productive. A popular market variety.

WOODRUFF RED (Red).—Originated in Michigan. Bunch medium to large, short, compact; berry large; skin thick, of a beautiful, bright red color; very handsome and attractive, making it a profitable market variety. Vine very vigorous, hardy, healthy and unusually productive. Ripens with Concord.

CUNCUME.

BRIGHTON (Red).—Bunch medium to large, long, compact, shouldered; berries medium; skin thin; flesh tender, sweet, with scarcely any pulp; quality best. A free grower and very productive.

ELVIRA (White).—Bunch and berry medium, very compact. Vine a vigorous, strong, healthy grower and very productive. Ripens late; about with

## Asparagus

GIANT ARGENTILE.—Finest and most prolific of all; stock of immense size; attractive, rich and tender; comes into cutting condition earlier than most other varieties. Very reliable and a sure money maker. Comparatively free from rust and blight.

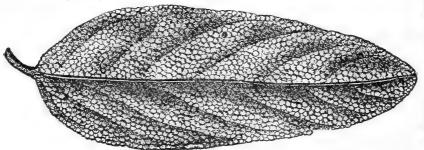

**PALMETTO.**—Early, large and comparatively free from rust; makes a heavy yield. Altogether this variety is very popular and is regarded by most growers as one of the most profitable of the market

### Miscellaneous

HORSERADISH (Bohemian or Maliner-Kren).—This is grown by planting the small sets or pleces from the side roots in deep, rich soil and cultivating in the same manner as with the ordinary pleces from the side roots in uses, here ordinary traiting in the same manner as with the ordinary variety of horseradish, but the plan's are so much stronger in growth that the roots grow to considerable larger size and greater weight. Undoubtedly ably larger size and greater weight. this is the best variety to grow.

SAGE (HOLT'S MAMMOTH). — This useful plant, which produces leaves of great sizes, should be in every garden. The plant is vigorous and a very strong grower. It is really the only variety of sage worth extensive cultivation and in every way desirable. Very hardy; does well in all sections.

RHUBARB (Pie Plant). — Plant in dry, rich soil to secure large, heavy stalks in rows four feet apart, with the plants three feet apart. Set the roots so that the crown will be about one inch below the surface. Top dress annually in the fall with good stable manure and fork under in the spring. Our quotations are for good, strong divisions.

HOLT'S MAMMOTH SAGE.

## pecial Collections

Positively no changes will be made in these collections. If they do not contain what you want, order from the general list. tions.

COLLECTION "A" -Early varieties. 12 Climax, 12 Gill, 12 Early Ozark, 12 Dunlap, 12 King Edward. All by mail, postpaid, for \$1.00.

COLLECTION "B"—Mid-season varieties. 12 Abington, 12 Collossus, 12 Glen Mary, 12 Sample, 12 New York, 12 Tennessee Prolific. By mail, postpaid, for \$1.00.

COLLECTION "C" — Late varieties. 12 Chesapeake, 12 Barrymore, 12 William Belt, 12 Mascott, 12

Florella. By mail, postpaid, for \$1.00.

COLLECTION "D" — Early, medium and late. 12 Wildwood, 12 Climax, 12 Dunlap, 12 Early Ozark, 12 Bradley, 12 Collossus, 12 Goldsboro, 12 Mascott, 12 Blaine, 12 Chesapeake. By mail, post-paid, for \$2.00.

COLLECTION "E" — New kinds recommended for trial. 12 Barrymore, 12 Bethel, 12 Black Beauty, 12 First Quality, 12 Ideal, 12 Mascott, 12 Lea, 12 Sam Wherry, 12 Silver Coin, 12 Twilley, 12 Ekey, 12 Wildwood, 12 Paul Jones, 12 Blaine, 12 Prolific, 12 Bountiful. All by mail, postpaid, for \$5.00.

#### The following collections are all by ex-press, purchaser to pay transportation.

COLLECTION "F"—Early varieties. 25 Early Ozark, 25 Climax, 25 Dunlap, 25 Excelsior, 25 Gill. All for \$1.00.

COLLECTION "G" —Mid-season varieties. 25 Abington, 25 Bountiful, 25 Glen Mary, 25 Bradley, 25 Buster, 25 Collossus, 25 Ekey, 25 Governor Rollins, 25 New York, 25 King Edward, 25 Bethel, 25 Sample, 25 Haverland, 25 Tennessee Prolific, 25 Black Beauty.

COLLECTION "H" — All late varieties. 25 Chesapeake, 25 Barrymore, 25 Nick Ohmer, 25 North Shore, 25 Gandy, 25 Brandywine, 25 Mascott, 25 En-hance. All for \$2.00.

COLLECTION "I" — Early to late. 25 Early Ozark, 25 Climax, 25 Dunlap, 25 Abington, 25 New York, 25 Glen Mary, 25 Sample, 25 Mascott, 25 Brandywine, 25 Nick Ohmer, 25 Barrymore. All for \$2.50.

COLLECTION "J" -Half acre collection. Climax, 1,000 Dunlap, 1,000 Florella, 1,000 Brandy-wine. All for \$10.00.

COLLECTION "K" -One acre collection. 1,000 Early Ozark, 1,000 Dunlap, 1,000 Glen Mary, 1,000 Parson's Beauty, 1,000 Haverland, 1,000 Tennessee Prolific, 1,000 Chesapeake. All for \$25.00.

COLLECTION "L"

cess, purchaser to pay transportation.

COLLECTION "L" —New varieties recommended for trial. 25 Amanda, 25 Barrymore, 25 Bethel, 25 Blaine, 25 Black Beauty, 25 Bountiful, 25 First Quality, 25 Ideal, 25 Lea, 25 Longfellow, 25 Mascott, 25 Mellie, 25 Ohio Boy, 25 Orem, 25 Paul Jones, 25 Prolific, 25 Quality, 25 Sam Wherry, 25 Silver Coin, 25 Twilley, 25 Wildwood. All for \$10.00.

COLLECTION "M" —Experimental Station special, consisting of 25 plants each of the 100 varieties of strawberry plants listed in this catalogue, amounting to \$37.75. All for \$25.00.

COLLECTION "M" —Try Them All Collection. Same as Collection "M," except only 12 each of the 100 varieties listed. For only \$15.00.

COLLECTION "O"—The Family Delight Home Garden Collection. 50 Wildwood, 50 New York, 50 Chesapeake and 50 Dunlap Strawberry Plants, 50 Early Harvest and 50 Eldorado Blackberry Plants, 50 Early Harvest and 50 Eldorado Blackberry Plants, 50 King, 50 Cuthberl Red Raspberry Plants, 50 Clarly Harvest and 50 Eldorado Blackberry Plants, 50 Columbian Purple Raspberry Plants, 25 Wilder and 25 Fay's Prolific Currants, 12 Houghton and 12 Downing Gooseberry Plants, 2 Moore's Early, 2 Concord, 2 Niagara, 2 Diamond, 2 Wyoming Red, 2 Vergennes Grape Vines, 100 Asparagus Roots and 12 Rhubarb Roots. All for \$12.00.

Per, or Imp. preceding the name in price list designates whether the variety has Perfect or Imperfect blossoms.

D

Canadian customers wanting Strawberry Plants by mail will please add 5c. per dozen, 13c. per 50 and 25c. per 100, to the prepaid rate, as we have to pay double postage to your country.

The prices given for 1000 or 5000 as the case may be for that quantity of one variety and not for an assortment; to illustrate: we offer 5000 Glen Mary for \$17.50, whereas, if 5000 plants of 5 different varieties are wanted they must come under the 1000 rate.

The figures at left of price list indicate the page on which the variety is described.

### Cantaloupes, Cucumbers and Watermelons

While as previously announced we have discontinued the retail seed business, being large growers for commercial purposes of canteloupes, watermelons and cucumbers, I will make an exception of the varieties of these that I grow for commercial purposes. It is but natural that we should spare no pains to have the very best that can be produced of these items when we are growing them by the 100 acres or more for market.

In Canteloupes I doubt if there is a variety on the market today that will anywhere near compare with the Eden Gem in the qualities that make up a valuable market variety. The past season there were over one hundred varieties grown for the Department of Agriculture on my farm, and the Eden Gem was decidedly the best in the lot. The Burrel strain of Eden Gem is unquestionably the very best market canteloupe there is to be had. The quality is very fine. The canteloupe is rough netted all over, therefore making an excellent showing, and when you open the canteloupe the purchaser is not deceived by the quality, as there is positively none better. We take particular pains to save the best of the best for our own use, and generally have a surplus. It is of this that I offer.

In Cucumbers I grew 40 acres the past season for commercial purposes. Of all the varieties, and I have tested them about all, we have found nothing that equals Peninsula Prize as a market cucumber. It is a healthy, vigorous grower, very productive, of medium long, uniform, and very dark colored fruits; just what the market wants. Positively as a cucumber for the market there is nothing better. We have saved a considerable amount of seed from the very best of those that I have grown of this variety; we know there is none superior, very few, if any, equal. This is the seed that I am offering you.

In Watermelons I will name three varieties which I am growing for market. The Success has been with me everything that its name implies. It is a good

shipping melon, very large size, very productive and good quality. The outer skin is a solid green, or as called by some a dark blue. Many markets however demand a striped melon. To supply this demand we have in Phillips Beauty, I believe, the very largest of the striped varieties. It is exceedingly productive and big enough to attract the attention of any buyer who is looking for exceptional big melons. Sixty-pound melons in my patch the past season were easily found almost anywhere. There is still another type. A few markets like a long melon. In Tom Watson we have the cream of the list; the very sweetst of all watermelons grown. I except none. It is a good shipper, and where quality is appreciated it must take first rank. My stock of this is of the very best that can be procured.

The canteloupes and cucumbers above offered are all of my own growing. I know positively that they are very fine. The watermelon seeds are grown for me by the best growers in Florida: the Success by the originator of that variety; the Phillips Beauty and Tom Watson by seed furnished by myself. We offer to commercial growers as follows:

CANTELOUPES, EDEN GEM (Burrell Strain).
—\$1.00 per lb.; \$8.00 per 10 lbs.; \$75.00 per 100 lbs.

CUCUMBERS, PENINSULA PRIZE. -\$1.00 per lb.; \$8.00 per 10 lbs.; \$75.00 per 100 lbs.

**WATERMELONS, SUCCESS.**—\$1.00 per lb.; \$7.50 per 10 lbs.; \$60.00 per 100 lbs.

**WATERMELONS, TOM WATSON.** -\$1.00 per lb.; \$7.50 per 10 lbs.; \$60.00 per 100 lbs.

**WATERMELONS, PHILLIPS BEAUTY** \$1.00 per lb.; \$7.50 per 10 lbs.; \$60.00 per 100 lbs.

The prices on above seeds are by express, receiver to pay charges except by the single pound rate, which will be sent by mail postpaid.

# Ornamental Shrubbery

#### ALTHEA (Hibiscus Rose of Sharon).

ARDENS. -A familiar purplish blue variety: very fine. 12 to 15 inches, 15c. each; \$1.40 per dozen. 2 to 3 feet, 25c. each; \$2.50 per dozen.

DUC DE BRABANT. -Deed red.

12 to 15 inches, 15c. each; \$1.40 per dozen. 18 to 24 inches, 20c. each; \$2.00 per dozen.

ALBA PLANA. — Deep white.
12 to 15 inches, 15c. each; \$1.40 per dozen.
2 to 3 feet, 25c. each; \$2.50 per dozen.

**LADY STANLEY.**—Deep pink,; very fine. 12 to 15 inches, 15c. each; \$1.40 per dozen. 18 to 24 inches, 25c. each; \$2.50 per dozen.

#### AMPELOPSIS.

VEITCHII (Boston Ivy). -A strong, rapid growing, assiduous vine; handsome green foliage, assuming charming sun tints in the fall. Perfectly hardy and most popular of the running vines. 15c. each; \$1.50 per dozen.

#### CERCIS (Red Bud).

 $\begin{array}{lll} \textbf{CANADENSIS.} & - \text{Small}, & \text{rapid} & \text{growing,} & \text{rc} \\ \text{headed tree or bush.} & \text{Two-year plants, } 25\text{c. each.} \end{array}$ round

#### CLEMATIS.

PANICULATA. -The most desirable, useful and beautiful of hardy garden vines, being a luxuriant grower, profuse bloomer and possessing fine foliage. Particularly useful for covering verandas, pillars, fences, where a trellis or support can be provided for it to climb on. The white flowers are very pretty, fragrant and produced in the greatest profusion in late summer. Strong, field grown plants, 35c. each; \$2.00 per dozen.

#### COLUTEA.

ARBORESCENS.—A very rapid growing, large shrub, with delicate, light green foliage; yellowish red, pea shaped flowers in June, followed by curious and showy red pods. Strong, two-year plants, 30c. each; \$2.50 per dozen.

#### CORNUS.

MASCULA (Cornelian Cherry). -Handsome shrub of dense growth; showy, yellow flowers before the foliage and large, shining, scarlet berries in the fall. Strong, two-year plants, 25c. each; \$2.00 per

SIBERICA (Red-Branched very conspicuous and ornamental winter shrub on account of its blood-red bark. plants, 25c. each; \$2.00 per dozen.

#### CRATAEGUS (Hawthorne).

OXYCANTHA.—Their sweet-scented flowers are followed by bright red berries. They bloom about the second week in May; very desirable. Strong, two-year plants, 20c. each; \$2.00 per dozen.

#### CYDONIA.

JAPONICA (Red Japanese Quince). -One of the most brilliant flowering shrubs in our collection. A well-known sort of rather bushy growth; completely covered with dazzling scarlet flowers very early in the spring. Strong, two-year plants, 25c. each.

UMBILICATA.—Brilliant rosy-red flowers, followed by large, showy fruit; one of the very best; very fine. Strong, two-year plants, 25c. each; \$2.00 per dozen.

#### CYTISSIS (Golden Chain).

LABURNUM.—An extremely bright and graceful shrub in early summer; the racemes of wis:aria-like golden yellow flowers make it very beautiful. 25c. each; \$2.00 per dozen.

#### DEUTZIA.

CRENATA. -Flowers double, white, tinted with 12 to 18 inches, 15c. each; \$1.50 per dozen.
2½ to 4 feet, 25c. each; \$2.00 per dozen.

GRACILLIS. -Of dwarf, bushy habit. The racemes of white flowers completely cover the plant, making it one of the most attractive shrubs of its season, blossoming in June. 12 to 15 inches, 10c. each; \$2.00

PRIDE OF ROCHESTER.—A variety producing large, double white flowers. This is one of the very finest Deutzias and is sure to give satisfaction

everywhere. 12 to 18 inches, 10c. each; \$1.00 per dozen.  $2\frac{1}{2}$  to 3 feet, 25c. each; \$2.00 per dozen.

#### ENONYMUS (Burning Bush).

EUROPEAUS.—Erect shrub or small tree; good foliage and desirable in shrubbery masses; most attractive in autumn when covered with orange-scarlet vessels. Strong, two-year plants, 20c. each; \$2.00 per dozen.

#### FORSYTHIA (Golden Bell).

SUSPENSA. — Flowers bright yellow, somewhat drooping; blooms very early in the spring.

Strong, one-year plants, 15c. each; \$1.50 per doz.

Strong, two-year plants, 20c. each; \$2.00 per doz.

FORTUNA. - This makes long, being extremely pretty when its arched branches are full of golden-yellow flowers in April. This is the most erect growing variety and decidedly the best when only one variety is planted.

Strong, one-year plants. 15c. cach; \$1.00 per doz.
S.rong, two-year plants, 25c. each; \$2.25 per doz.

#### GHINKO (Maiden Hair).

BILOBA.—Recently this tree has sprung into great popularity, and it merits the praise it receives. It is remarkable as a deciduous member of the pine family, with odd-shaped leaves that resemble those of the Maidenhair Fern; highly ornamental for lawn planting. Small, well-rooted trees, 20c. each: \$2.00 per dozen.

#### HALESIA (Snowdrop Tree).

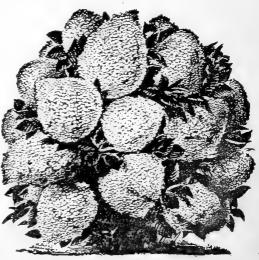

TETRAPTERA (Silver Bell). - Medium producing as soon as the leaves appear a great number of large, crowded clusters of pure white, bell shaped flowers. Strong, two-year plants, 25c. each; \$2.25 per dozen.

#### HAMAMELIS.

VIRGINICA (Witch Hazel).— A tall-growing shrub, often growing eight feet, with very large, dark green foliage and showy yellow flowers just before the leaves fall in autumn; very hardy and easy of culture. Strong, two-year plan(s, 20c. each; \$2.00 per deep. per dozen.

#### HYDRANGEA.

PANICULATA GRANDIFLORA. - Blooms from PANICULATA GRANDIFLORA.—Blooms from July to September. There is no shrub more showy than this favorite Hydrangea, whose branches are bent beneath the weight of the huge white flower cluster. This illustration will give you some idea of the bush in full bloom, but we think it hardly does it justice. As the season advances the panicles fade into tints of pink, red and sometimes green. A vigorous grower in nearly all soils and hardy in most

HYDRANGEA, P. G.

parts of the United States. Should be in all collections; valuable as a specimen and useful for grouping. 12 to 15 inches, 20c. each; \$2.00 per dozen. 18 to 24 inches, 25c. each; \$2.50 per dozen.

#### JASMINUM (Yellow Jasmine).

NUDIFLORUM.—Blooms in February and March. Hardy only in sheltered places north of Philadelphia. Admired for its yellow flowers in the first warm days of spring.

15 to 18 inches, 25c. each; \$2.25 per doozen, 18 to 24 inches, 35c. each; \$3.00 per dozen.

#### KERRIA (Japonica).

SINGLE. - Shrubs with tender, bright green branches that are ornamental even when divested of leaves. They grow in almost any soil, and do well in open or shaded places. All the varieties have attractive foliage; valuable for shrubberies. Orangeyellow flowers borne in abundance. Strong, two-year plants, 25c, each; \$2.25 per dozen.

DOUBLE CHOCHORUS. -Same as above, with double flowers, and if only one variety is to be planted this one is to be preferred. Strong, two-year plants, 25c. each; \$2.25 per dozen.

#### KOELREUTERIA (Varnish Tree).

PANICLLATA.—A small, round-headed tree from China, with large pinnate leaves; conspicuous on account of its brilliant, golden blossoms, which are produced the latter part of July, when few, if any, trees are in bloom. Strong, two-year trees, 25c. each; \$2.25 per dozen.

#### LIGUSTRUM (Privet for Hedging).

See illustration on back cover page.

OVALIFOLIUM (California Privet). - Widely known as a hedge plant. It is a vigorous grower everywhere, endures the unnatural condition of cities and is one of the best shrubs for hedge planting. The half evergre n. glossy foliage and pure white flowers in July make it an ornamental shrub that is generally useful. This plant is so universally known and so generally used for hedges that a description of it is secretally uncessary. It is a really grower under all generally used for hedges that a description of it is scarcely necessary. It is a rapid grower under all conditions, has handsome, glossy foliage that lasts well into winter and withstands any amount of trimming. We have a very large stock of especially fine plants that are splendidly rooted and not to be compared with a great deal of the weak stuff offered by agents. If you are intending to plant a hedge, let le hear from you. 12 to 15 inches, one year, \$1.00 per hundred; \$8.00

per thousand.

per thousand.
15 to 18 inches, two years, 50c. per dozen; \$1.50 per hundred; \$12.50 per thousand.
18 to 24 inches, two years, 60c. per dozen; \$2.00 per hundred; \$18.00 per thousand.
2 to 3 feet, two years, 75c. per dozen; \$3.00 per hundred; \$25.00 per thousand.

4 feet respectively.

4 feet or over, heavy specimens, 20c, each,

AMURENCE (Amoor River Privet). -Oblong, glossy, green foliage, half evergreen: will grow to fifteen feet if not trimmed. A variety strongly recommended; useful either as a shrub or for hedging; very hardy.

12 to 15 in., \$2.00 per 100; \$16.00 per M. 15 to 18 in., \$2.50 per 100; \$20.00 per M. 2½ to 3 feet, strong, 2-year, \$3 per 100; \$25 per M.

**IBOTA.** -True. upright Ibota: large, glossy, distinct foliage; large, fragrant white flowers, produced in great profusion. Used principally as a shrub. 12 to 15 inches. 75c. per dozen: \$3.00 per 100. Specimen plants, 3 feet, strong and well branched, 30c. each; \$3.00 per dozen.

#### LAGERSTROEMIA (Indica).

CRAPE MYRTI.E. -Too much cannot be said in praise of the beautiful, deciduous Indian shrub. masses of flowers are profusely borne from spring until autumn on small as well as large plants. A splendid plant for b dding out in the North, where it gives perfect a isfaction, even though it dies out in the winter in cold sections. It will spring up from the roots in the spring and give an abundance of blooms all through the late summer. It is grand for hedges and single specimens. We have some very We have some very by. 18 to 24 inches, very fine plants; strong and bushy. 50c. each.

#### LYCIUM (Matrimony Vine).

CHINENSE. -A vigorous, hardy climbing plant. It will cover a great amount of space in a short time, and every new growth is at once covered with bright purple flowers, which are succeeded by brilliant scarlet berries nearly an inch long. It will grow and thrive in either shade or bright sunlight. 20c. each; \$2.00 per dozen.

#### LONICERA (Bush Honeysuckle).

TATARICA. -One of the first shrubs to bloom and leaf out in the early spring. Very pretty. Sometimes in full leaf and bloom before the last snows are over. 2 feet, 40c. each.

GRANDIFLORA ROSEA.—A very ornamental, strong-growing kind, having pretty pink and white flowers early in the spring. 25c. each; \$2.25 per

PUNICA.—This is a trailing variety, with large, deep crimson flowers with yellow throats; blooms throughout the whole summer. Should be in every collection. 25c. each; \$2.25 per dozen.

#### MAHONIA (Ashberry).

AQUIFOLIA.—A native shrub of medium size, with large, shining, prickly leaves, similar to those of the famous English Holly, which turns scarlet in the fall; bright yellow leaves in May, succeeded by bluish berries. 12 to 15 inches, strong, 25c. each; \$2.25 per dozen.

JAPONICA.—A new variety from Japan, with very broad, spiny foliage of a light green color; yellow flowers in May. 12 to 15 inches, strong, 30c. each; \$2.50 per dozen.

#### PAULOWNIA (Empress Tree).

IMPERIALIS.—Very showy and valuable tropical-looking tree; medium size; extremely rapid growth, surpassing all others in size of leaves; those on young trees are often of immense size; flowers blue, trumpet shaped, formed in large, upright panicles Very conscious frogrant and heautiful 18 icles. Very conspicuous, fragrant and beautiful. to 20 inches, strong, well rooted, 50c. each.

#### PHILADELPHUS (Mock Orange).

PHILADELPHUS (MOCK ORANGE).

GRANDIFLORA. -Forms a large, spreading bush, with graceful, drooping branches. A common desirable shrub; blooms in May and June. One the most desirable shrubs you can plant.

12 to 15 inches, 15c. each; \$1.00 per dozen.

15 to 18 inches, 26c. each; \$1.50 per dozen.

18 to 24 inches, 25c. each; \$2.00 per dozen.

2 to 3 feet, 35c. each; \$3.00 per dozen. common and One of

LEMONEI. -Of upright growth; small leaves and fragrant flowers. Not so well known as the older kinds, but one of the best.

12 to 15 inches, 15c. each; \$1.25 per dozen.

18 to 24 inches, 20c. each; \$2.00 per dozen.

CORONARIUS. - Sometimes called Garland Sv-ARH S.—Sometimes called Garland Sy-a. A well-known shrub, with pure white, highly ted flowers. One of the first to bloom. 12 to 15 inches, 15c. each; \$1.00 per dozen. 15 to 18 inches, 20c. each; \$1.50 per dozen. 2 to 3 feet, 30c. each; \$2.50 per dozen. ringa. scented flowers.

SPECIOSSIMUS .- Of dwarf habit, forming bushes about three feet in height, and covered with very large, sweet-scented flowers; distinct and very fine. 12 to 15 inches, 20c. each; \$1.50 per dozen. 2 to 3 feet, 30c. each; \$2.50 per dozen.

AUREA.—Foliage golden yellow; very effective. Keeps its color the entire season, and will be found valuable for creating pleasing and striking contrasts with purple-leaved shrubs. Small, well rooted, 20c. each; \$2.00 per dozen.

#### RHAMNUS (Buckthorn).

CATHARTICUS .- The dark foliage masses of this dense, twiggy shrub are relieved by a profusion of attractive white flowers in June and July, followed by showy black fruit. Strong, two-year-old plants, 25c. each.

#### RHUS (Sumach).

COTINUS (Purple Fringe). -Much admired for Its curious fringe or hair-like flowers that cover the whole surface of the plant at mid-summer.

18 to 24 inches, 25c. each; \$2.25 per dozen.

3 to 4 feet, 35c. each; \$3.00 per dozen.

#### ROSA (Sweet Briar).

RUBIGINOSA. -The well-known Sweet Briar, with highly scented foliage; small, pink, fragrant flowers and quantities of bright fruit. Blooms in June. Strong, two-year plants, 25c. each.

RUGOSA.—The foliage exhibits a mass of dense, luxuriant, glossy green. The flowers are large, and the perfection of form and color; are produced continuously throughout the season and until late in autumn, and as they mature are replaced by small, golden and red fruit. Strong, two-year, well-rooted plants, 25c. each.

#### ROSES.

CRIMSON RAMBLER -A and well known critists. A strong, rapid grower that produces exceedingly large and brilliant clusters of small, double crimson flowers in great profusion. There is nothing finer for trailing over verandas. Small, well-rooted plants, 15c. each; \$1.50 per dozen. Large, two-year plants, 25c. each; \$2.00 per dozen.

DOROTHY PERKINS.—A splendid sort, with beautiful, shell-pink flowers; full, large and double. The tresses often contain 30 or 40 individual flowers. Good climber. Well rooted, small plants, 15c. each; \$1.50 per dozen. Large, strong, two-year plants, 25c. each; \$2.00 per dozen.

THE BLUE ROSE.—This is the novelty of the century, and perhaps the best way to describe this would be to say that it is a Blue Crimson Rambler would be to say that it is a Blue Crimson Rambler—that is, imagine a climbing rose, with all the hardiness, strength and vigor of the Crimson Rambler, covering immense spaces with its wondrous heavy canes and large, splendid foliage, and bearing immense tresses of semi-double flowers all the way from 20 to 50 in a cluster; but instead of the gorgeous crimson flowers. We all know so well picture in your mind similar clusters of exquisitely beautiful blue roses, a blue very similar in shade to the delicate, inimitable blue of the Jackman Clematis. Strong, two-year, field-grown plants, 50te asch two-year, field-grown plants, 50c. each.

#### SALIX (Willow).

BABYLONICA (Weeping Willow).—Our common and well known Weeping Willow; perfectly hardy and a rapid grower. 2 to 3 feet, strong, well rooted, 25c. each.

ROSMARINIFOLIA (Rosemary Willow).— A handsome, odd-looking tree, with rounded head, slender twigs and small, silvery leaves. Strong, wellrooted plants, 2 to 3 feet, 25c. each.

REGALIS (Royal Willow).—Rich, silvery follage; very ornamental. Small plants, well rooted, 25c. each

VITELLINA AUREA (GOIGER VILLIANDE LIGHT PROPERTY OF THE LIGHT GREEN LIGHT STREET LI VITELLINA AUREA (Golden Weeping Wil-It makes a fine specimen, with a personality that other trees do not possess. Strong, 2 to 3 feet trees, 25c. each.

AUREA PENDULA. - Small, well-rooted trees. 25c. each.

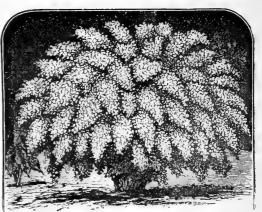

BRITZENSIS (Red Barked Willow) - This tree makes a very pretty specimen. rooted plants, 2 to 3 feet, 25c. each. Strong, well-

#### SOPHORA (Japan Pagoda Tree).

JAPONICA.—One of the nicest little trees for large or small plantings. It presents a neat, attractive appearance, with small, shining green leaves. In August, when there are few other flowers, this is showy, with clusters of white bloom. The wood of young trees is olive green. 18 to 20 inch trees, 30c. each; \$2.50 per dozen.

#### SPIREA.

VAN HOUTTEI.—Among the very finest of flowering shrubs; a strong, hardy grower of graceful, drooping habit, with handsome foliage. The profusion of

SPIRAEA, VAN HOUTIE

bloom weighs the slender branches and covers the bush with a beautiful canopy of white. I from any standpoint.

12 to 15 inches, 15c. each; \$1.00 per dozen.
2 to 3 feet, 20c. each; \$2.00 per dozen.
3 to 4 feet, 30c. each; \$3.00 per dozen.

DOUGLASSI. - Spikes of beautiful, deep rose-col-

Fored flowers in July and August.

12 to 18 inches, 15c. each; \$1.00 per dozen.

2 to 3 feet, 25c. each; \$2.00 per dozen.

THUMBERGII .- Of dwarf habit and rounded, gracefully formed branches, stender and somewhat redrooping; foliage a yellowish green; flowers small white, appearing in early spring, being one of the first Spiras to flewer; esteemed on account of its fineat, graceful habit. Strong, 18 to 24 inch plants, 1956, access. \$2.00 per degree. 25c. each; \$2.00 per dozen.

ANTHONY WATERER.—Blooms from June un-l frost. One of the most popular shrubs, posesstil frost. One of the most popular strubs, posessing the characteristics and robust habit of the parong the characteristics and robust habit of the parent form, but with crimson flower heads of a richer, brighter has. Good foliage, frequently splashed with odd, though pretty, yellowish white markings. A beautiful edging and desirable plant at the front of shrubberies or wherever a low bush is desired. Strong, well-rooted plants, 12 to 15 inches. 20c. each; \$2.00 per dozen.

PANICULATA. -One year, 25c. each; two years, 3 feet, 35c. each.

CALLOSA ROSEA. - Produces an abundance of deep, rosy flowers, which lasts practically all summer. Grows freely and a very satisfactory shrub. 18 to 24 inches, 25c. each; \$2.00 per dozen.

#### STEPHANANDRA.

FLEXUOSA. — A thick shrub, with graceful branches and handsome small foliage that is almost as delicate as a fern, and turns a bronze red in late summer and autumn. Small, inconspicuous, fragrant flowers are up and down the branches. Grows easily, and is adapted to rocky places and shrubbery borders. Strong plants, 2 to 2½ feet, 35c. each; \$3.00 per doz.

#### SYMPHORICARPUS.

RACEMOSUS (Snowberry). - Small, red flowers in July and August, succeeded by white berries; very attractive. Strong plants, 18 to 24 inches, 25c. each; \$2.00 per dozen.

VULGARIS (Indian Current). -Similar in character to the above; useful in the same ways; purplish red berries in autumn. Strong plants, 18 to 24 inches, 25c. each; \$2.00 per dozen.

#### SYRINGA.

VULGARIS (Common Purple Lilac). - Strong, well-rooted plants, 35c. each; \$2.50 per dozen.

VULGARIS ALBA (Common White Lilac) .-Strong, well-rooted plants, 35c. each; \$2.50 per dozen.

\*VHIV VOISHED —A fine, old variety of rather dwarf habit; very fragrant white flowers, tinged with purple. 35c. each.

TAMARIX.

AFRICAN.—Shrubs of strong, but slender, upright growth: clothed with foliage as light and feathery as that of the asparagus. Their delicate fringing flowers are usually some warm shade of

pink or red. Hardy as far North as Massachusetts.

when the first array as far North as Massachusetts. Very ornamental at the back of shrubbery borders and valuable for seaside planting.

1 yr., 18 to 24 in., 15c. each; \$1.00 per doz.
2 yrs., 2 to 3 ft., 20c. each; \$2.00 per doz.
2 yrs., 4 to 6 ft., 25c. each; \$2.50 per doz.

#### VIBURNUM.

OPOLUS (Common Snowball). — This is the snowball that decorated the old farm yards beside the peony and lilac. When well cared for it is a beautiful shrub, with large globular clusters of white flowers, blooming about Decoration Day.

15 to 18 inches. 20c. each; \$2.00 per dozen.

PLICATUM. (Japanese Snowball).-This is a beautiful shrub from Japan, with dark, crinkled leaves, and has a sterile flower in large, spherical clusters, like the old-fashioned snowball. As its foliage is free from insect attacks and is darker green, it is superior to the old-fashioned snowball. It can be plan'ed as a single specimen near the house and will give almost immediate effect.

15 to 18 inches. 20c. each; \$2.00 per dozen.

2 to 3 feet, 25c. each; \$2.50 per dozen.

3 feet,

CASSINODES. -This is native both to damp and dry upland. It is a graceful shrub of about seven feet high, with light green, elliptical leaves and white flowers, followed by black berries. 12 to 15 inches, 25c. each; \$2.50 per dozen.

OXYCOCCOS (High Bush Cranberry). -Both ornamental and useful, its red berries resembling cranberries; esteemed by many; hang until destroyed by frost late in the fall. Strong plants, 15 to 18 Inches, 25c. each; \$2.50 per dozen.

VIBURMUM, OPOLUS (COMMON SNOWBALL).

#### WEIGELAS (Diervilla).

An important group, indispensable for ornamental planting. They thrive in any soil, are strong growers and generally hardy. When young of upright habit, growing with age into more graceful shrubs. Useful as specimens and desirable for groups and masses. In May and June the Weigelas are aglow with a wealth of flowers, borne all along their branches, and some varieties flower sparingly through the summer.

ARBOREA GRANDIFLORA. - A beautiful pink;

very fine variety.

12 to 15 in., strong, 25c. each; \$2.00 per doz.

2 to 3 ft., 30c. each; \$2.50 per doz.

CONQUETE. - Very large, deep pink flowers; the largest flowers of all varieties and one of the most

beautiful. 1 yr., 12 to 15 in., 20c. each; \$2.00 per doz. 2 yrs., 2½ to 4 ft., 30c. each; \$3.00 per doz.

CANDIDA. -A vigorous, healthy-growing variety.

with pure white flowers; very pretty.

1 yr., 15 to 18 inches, 20c. each; \$2.00 per doz.

2 yrs., strong, 3 to 4 ft., 30c. each; \$2.50 per doz.

DESBOISII. - A beautiful variety, with deep, rosedarker. One of the best.

15 to 18 inches,

20c. each; \$2.00 per doz.

3 to 4 ft., 2-yr., strong, 25c, each; \$2.50 per doz.

DUCHARTRE. —Free flowering, double dark red. 1 year, strong, 15 to 18 in. plants, 25c. each; \$2.00 per dozen.

WEIGELIA DIERVILLA). EVA RATHKE.

EVA RATHKE. -An exceedingly showy variety; decidedly the best of its color. An almost continuous bloomer; flowers a beautiful crimson, a beautiful, dis-tinct, clear shade. The plant while in bloom is almost

ther, clear shade. The plant while in close is as as an Azalet.

1 yr., 12 to 15 in., 15c. each; \$1.25 per doz.

15 to 18 in., 20c. each; \$2.00 per doz.

2 ½ to 3 ft., 25c. each; \$2.50 per doz.

GUSTAVE MALLET. - A valuable variety, with

an abundance of rose-colored flowers; very fine.

12 to 15 inches, 15c. each; \$1.25 per dozen.
15 to 18 inches, 20c. each; \$2.00 per dozen.
3 to 4 feet, 25c. each; \$2.50 per dozen.

GORENEWEGENNI. -Flowers red outside, with a lighter shade inside. A very pretty variety. Do not fail to include this in your list.

1 yr. 12 to 15 in., 15c. each; \$1.25 per doz.

2 yrs., strong, 2 to 3 ft., 25c. each; \$2.50 per doz.

**HENDERSONII.** — A vigorous, compact grower, with an abundance of pink flowers. An excellent variety.

1 year, 12 to 15 inches, 15c. each; \$1.25 per doz. Large, 2-yr.,  $2\frac{1}{2}$  to 4 ft., 25c. each; \$2.50 per doz.

ROSEA.—An elegant shrub of fine, rose-colored flowers, of erect, compact growth; a very fine variety. Strong, 2-year plants, 2 to 3 feet, 50c. each.

SYMONDSH. -Rose and white flowers, beautifully contrasted.

12 to 15 in., 1 yr., strong, 15c, each; \$1.25 per doz. 18 to 24 in., 2 yrs., strong, 20c, each; \$2.00 per doz. 2 to 3 ft., 2 yrs., strong, 25c, each; \$2.50 per doz.

STELZNERI. -An abundant display of rosy pink flowers in May that is often sparingly repeated late in the summer. A standard variety of vigorous, bushy

1 year, strong, 15c. each; \$1.50 per doz.  $2\frac{1}{2}$  to 4 ft., 2 yrs., strong, 25c. each; \$2.50 per doz.

VAN HOUTTEL. — Clear carmine flowers and a

profuse bloomer; a good one.

12 to 15 in., 1 yr., strong, 15c. each; \$1.25 per doz.

2 to 3 ft., 2 yrs., strong, 25c. each; \$2.00 per doz.

Anyone desiring a large quantity of Weigelas, we have a very large stock and would be pleased to make special questions by the 100 and 1000. special quotations by the 100 and 1,000.

WEIGELIA (DIERVILLA), WISTERIA, CHINENSIS

#### WISTERIA.

CHINENSIS. -The common variety, which flowers so profusely in May. Flowers pale blue and fragrant. It withstands the smoke of cities and will grow anywhere.

12 to 18 in., stg., well rooted, 25c. each. \$2.50 per doz. 3 to 4 ft., two-year stock, 35c. each; \$3.00 per doz.

CHINENSIS ALBA.—A beautiful white-flowering form of our common Wisteria that possesses the strong-growing, hardy qualities of its parent and is especially pretty to have flowering in connection with its pale blue flowers.

12 to 18 in., strong plants, 35c. each; \$3.00 per doz. 2 to 3 feet, 45c. each; \$4.00 per doz.

#### ORNAMENTAL GRASSES.

ERINANTHUS RAVENNA (Plume Grass).—A very ornamental grass, thriving in sunny situations in light, well-drained soils. It forms a handsome, broad clump, growing from seven to twelve feet high, with beautiful plumes and graceful, dark, bronzy-green foliage; is admirable to plant in connection with other grasses, or as a background for shrubbery. 20c. each; \$2.00 per dozen.

A low evergreen without a central stem. The long, narrow leaf blades come out from the root crown. In June or July it shoots up heavy stalks, laden at the top with ivory-white flowers. It is valuable in separate or mixed plants.

Small plants, 10c. each; \$1.00 per dozen. Large clumps, 25c. each; \$2.50 per dozen.

#### HARDY PHLOX.

#### Hardy Phlox.

We have a fine stock of Hardy Phlox, consisting of the best varieties in cultivation.

 ${\bf BACCHANTE.} - {\bf Deep}, \ {\bf rosy} \ {\bf carmine} \ ; \ {\bf enormous} \ {\bf flowers.} \ 10c. \ {\bf each} \ ; \ \$1.00 \ {\bf per} \ {\bf dozen}.$ 

 ${f COQUILICOT.}$  -A fine, pure scarlet, with crimson red eye. 10c. each; \$1.00 per dozen.

**OBERGARTNER WITTIG.** — Bright magenta, with crimson carmine eye; largest flowers and truss of its type. 10c. each; \$1.00 per dozen.

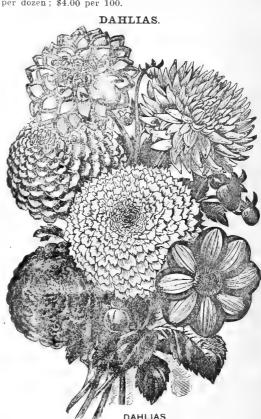

MRS. JENKINS. -The best white, immense pennacles, early and free bloomer. 10c. each; \$1.00 per dozen.

VON HOCHBURG.—The ideal crimson, the richest of its color. 15c. each; \$1.50 per dozen.

PROF. SCHLIEMANN. —Bright currant red, with a bright crimson eye. 10c. each; \$1.00 per dozen.

**BERRANGER.** — Ground color white, delicately suffused with rosy pink and distinct amaranth red eye. 15c. each; \$1.50 per dozen.

HARDY PHLOX IN MIXTURE.— We have a large stock of mixed varieties, mostly seedlings of the above-named kinds. We doubt if there is a better mixture on the market than ours. Many of the varieties are equal to the named sorts. I can furnish good, strong plants, outdoor grown, at 5c. each; 50c. per dozen; \$4.00 per 100.

All quotations on Dahlias are for divided clumps.

GRAND DUKE ALEXIS. — Very large white, tinted pale lavender; very fine. 15c. each; \$1.25 per dozen.

**SYMPHAEA.** — Color clear, light shrimp pink; very fine. 15c. each; \$1.25 per dozen.

WILLIAM AGNEW.—Rich, dazzling red; large size, and the best of all the red-flowering varieties. 10c. each; \$1.00 per dozen; \$5.00 per 100.

A. D. LIVONIA. —Beautiful, soft pink; early and profuse bloomer; one of the best. 10c. each; \$1.00 per 100e.

PROGRESS.—The color is clear, soft rosy like, beautifully penciled and spotted with glowing crimson. 15c. each; \$1.50 per dozen.

SIR CHARLES MILLS.—A beautiful, clear yel-

SIR CHARLES MILLS.—A brautiful, clear yellow; an early and free bloomer; one of the best yellows. 10c. each; \$1.00 per dozen; \$5.00 per 10c.

STRIPED BANNER. — Crimson scarlet, tipped with white. 15c. each; \$1.25 per dozen.

**SNOW CLAD.**—Small, very durable and a prolific bloomer; pure white. 10c. each; \$1,00 per dozen; \$5.00 per 100.

GENERAL BULLER. - One of the best of the Cactus Dahlias; flowers very free; deep cardinal red, shaded purplish maroon; many of the petals tipped with white. 20c. each; \$1.50 per dozen.

**JEALOUSY.**—Lemon yellow; very fine, beautiful and a free bloomer. 15c. each; \$1.25 per dozen.

MIXED VARIETIES. -Those who want a beautiful display, but do not care for name or variety, I will send a beautiful mixture entirely my own selection, but all good, showy varieties, but not labeled. 75c. per dozen; \$3.00 per 100.

### VEGETABLE PLANTS

For the last three or four years we have been doing a large business in vegetable plants, selling many hundred thousand Our specialties in this line are sweet potatiplants early cabbage plants, early tomato plants, caulidower, egg plants, pepper, beet, etc.

WEET POTATO PLANTS .- There is probably no section where better sweet potatoes can be gr wn than here in the Eastern Shore of Maryland. All customers are advised to buy plants. We expect to have a very fine stock at the proper season. I will have following va-

BIG STEM JERSEY .- (See Illustration). poular variety, especia: ly with those who wish to get their crop in market before others begin to dig lt is a heavy yielder, good quality, either for market or home use and the most largely grown of all varieties in this section. Plants 60c per 100 postpaid; \$2.00 per M.: \$16.00 per 10,000 by express receiver to pay charges.

GOLD SKIN .- This is a beautiful yellow potato, usually growing very chunky. It has a peculiarity of being almost a golden yellow inside, and is sometimes described as being all heart. The quality is very fine, and this is in every way a very desirable potato either for home use or market. Price of plants same as Big Stem Jersey.

RED NANSEMOND.—This variety has a blood red skin, but inside is yellow and dry. It cooks very fine and many think it one of the best on the market. Red Nansemond is especially popular where a dry potato is desired. This is also an excellent keeper, Price of plants are not as life Stom Lersey. plants same as Big Stem Jersey.

YELLOW NANSEMOND.—(UP RIVERS). This is a chunky, smooth yellow sweet potato; yields heavy and for all purposes a desirable variety Price of plants 60c per 100 postpaid; \$2.50 per M.; \$20,00 per 10,000.

Chester Co., Pa June 13, 1910.

W. F. Allen. Salisbury, Md.

Dear Sir - Sweet potato plants came Saturday in fine condition, could not have been better Several of my Severa friends aw me get them at the station and they thought they were splendid, Edw. H. Pugh.

Washington Co., Ind. May 20, 1910. W. F. Allen, Salisbury, Md.

Dear Sir: - Sweet potato plants came to hand in good condition. I thank you for same and also for good count. Yours, T. J. Tone.

CABBAGE PLANTS.—This is one of our specialties in vegetable plants. We ship hundreds of thousands North for early setting, and we understand the parties who have been buying them have heen highly pleased. It is evident that we will do a larger business in this line the coming Spring than ever before and we shall try to be prepared for it. Our early cabbage plants will be ready from the 1st to the 10th of April, and we grow the three leading varieties as follows;

EARLY JERSEY WAKEFIELD -The best of the fi st EARLY JERSEY WAREFIELD—Inc dest of the u st early cabbage in cultivation. It forms fine, solid heads of good size, conical in shape with few outside leaves, The quality is of the best, We offer this as the earliest strain of this variety and is sure to give satisfaction, LARGE CHARLESTON WAKEFIELD.—Selected stock; large solid heads of good quality, A few days ater than Early Jersey Wakefield, larger in size and combines all the good qualities of an early long-keep-

EARLY SUMMER.-This is one of the best of the large early fat head varieties, It is an exceedingly valuable market variety, adapted for close planting, and will thereby give a large number of heads per acre. Matures about ten days after Early Jersey Wakefield, The heads are very compact and solid, and usually double the weight of the Early Jersey Wakefield.

We can supply either of the above varieties 500 for \$1.25; 1000 for \$2.00; 10.000 or over at \$1,50 per 1000, I especially solicit orders for cabbage plants from Northern growers, I believe that we can give you better plants early in the season and for less money than you can grow them at home,

CAULIFLOWER .- Our plants are very fine, grown from best imported seed of Early Snow-ball. Ready any time after April 15th at 75c per 100;\$4, per 1000.

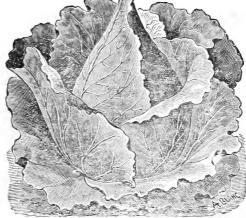

TOMATO PLANTS.—Our tomato plants are usually ready for the field from May 1st and after. The plants we offer are about 6 inches high, well hardened and ready for open field planting. I offer the following varieties; Earliana, Chalks Jewel, June Pink and Allen's Best. Our price is \$1.00 per 100; \$6.00 per 1000 by express receiver to pay params. receiver to pay charges.

EGG PLANTS.—We have been very successful in growing extra fine plants of this delicious vegetable, and offer the two best varieties, Black Beauty and New York Improved Spineless. Of the two I think Black Beauty the best. Plants ready about May 10th to 15th and after Price \$1,00 per 100: \$8 00 per 1000.

PEPPER PLANTS.—Well grown, strong, stalky and hardened ready for the field during May and June. Ruby King, the most popular variety. Price \$.75 per 100; \$4.00 per 1000.

BEET PLANTS.—Good strong, ready for the open field, that will give you beets two or three weeks earlier than seed sown in the open ground. Either Eclipse, Blood Red Turnip or Egyptian. Ready after April 15th Price \$1.25 per M.; \$10.00 per 10,000,

ONION PLANTS.—Prizetaker, ready by the middle of April. Price \$1 00 per 1000 in any quantity we may have.

EARLY JERSEY WAKEFIELD

Burlington Co., N. J. May 3, 1910.

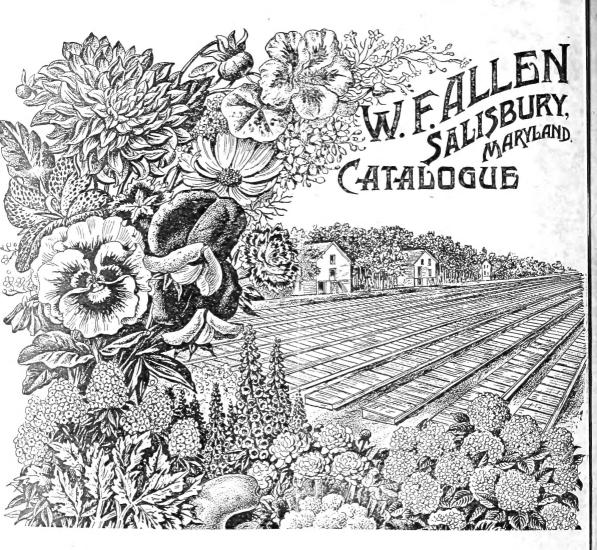

W. F. Allen, Salisbury, Md
Dear Sir.—The cabbage plants received Saturday
evening in g-cd condition for which I thank you very
much. Yours Respectfully, Edw. A. Newbold.

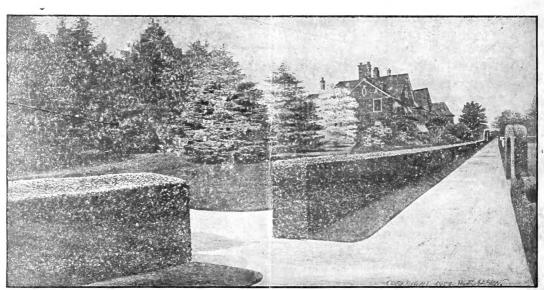

Richmond Co., N. Y., June 14, 1910.

W. F. Allen. Salisbury, Md.

Dear Sir.—The sweet potato plants were received this morning and they were in fine order for which I thank you very much.

W. A. Bishop.

A WELL TRIMMED HEDGE OF CALIFORNIA PRIVET
